# TOPIC TITLE: ENHANCING THE EFFECTIVENESS OF INTERNAL TRAINING PROGRAMS FOR THE VIDEO CALL CUSTOMER SERVICE AT BELLSYSTEM24 VIETNAM INC.

**Supervising lecturer: MSc. MA. Nguyen Thi Thao Trang**

## STATEMENT OF COMMITMENT

I hereby declare that this graduation thesis, entitled “Enhancing the effectiveness of internal training programs for the video call customer service at BELLSYSTEM24 Vietnam Inc.” is the result of my own independent research.

All information, data and findings presented in this thesis have been collected and analyzed by me and are presented honestly and accurately. I further declare that this thesis has not been copied from any other academic work and that all sources of information used in this study have been properly acknowledged.

I take full responsibility for the content and authenticity of this thesis.

***Bac Ninh,  ,2026***

**Student**

## ACKNOWLEDGEMENTS

To complete this graduation thesis, I received invaluable attention, support and assistance from the university, my supervising lecturer and the internship organization.

I would like to express my deepest gratitude to the Board of Directors and all the teachers of the Institute of International Training and Cooperation at Dong A University of Technology for providing me with a solid academic foundation specialized knowledge and all the necessary facilities to carry out and complete this research smoothly.

I would also like to sincerely thank my supervising lecturer, MSc. MA. Nguyen Thi Thao Trang for her invaluable guidance, continuous support and insightful feedback throughout the completion of this graduation thesis. Her academic expertise, dedication and constructive suggestions played a decisive role in shaping the direction, refining the logic and ensuring the scientific rigor of the research topic.

I would also like to express my sincere gratitude to the Board of Directors and all management of Bellsystem24 Vietnam Joint Stock Company for providing me with the valuable opportunity to intern and conduct experimental research at the organization. I am especially grateful to the operations supervisors and team leaders in the Video Call Customer Service department for their enthusiastic cooperation, openness and willingness to share practical internal information which formed the core of my current situation analysis.

Furthermore, I would like to express my sincere gratitude to the thirty- two customer service employees who took the time to participate in the Google Forms survey as their honest answers and practical feedback provided crucial primary data that formed the backbone of this thesis.

Finally, I would like to express my deepest gratitude to my family and friends for their encouragement, patience and unwavering moral support throughout my studies. Their unwavering belief in my abilities became a tremendous source of motivation, helping me overcome many challenges during my research. Without their unconditional love and support, I would not have been able to successfully complete this important milestone and perfect my graduation thesis.

# A. INTRODUCTION

## 1. Rationale for the Topic

### 1.1. Background and Research Area

In the context of digital transformation and increasingly fierce service competition, customer service quality has become a decisive factor in determining the competitive advantage of businesses in the service industry. However, a prominent characteristic of this field is its young workforce and high turnover rate. In this context, internal training is no longer a formal activity but has become a strategic tool to stabilize human resources and improve service quality. According to research by Fletcher et al. (2018), well- structured training programs not only equip employees with hard skills but also act as a psychological support mechanism, helping to increase employee engagement. High- quality training programs lead to positive changes in employee work attitudes, resulting in a surge in retention rates. Furthermore, research by Koster et al. (2011) refuted the common misconception among many companies that highly skilled employees will leave after training. Conversely, data showed that the better the internal training, the more significantly the employee turnover rate decreased.

For video call customer service positions, the job requirements become even more complex as employees must simultaneously control the content of consultations, maintain face-to-face communication skills and present a professional image to customers. If the training program is not designed to suit the specifics of this channel, new employees are very likely to experience job shock especially during the probationary period.

At Bellsystem24 Vietnam Inc.'s video call customer service department, because it is a relatively new area of implementation, the initial training program mainly focused on theory and order processing in a short time. This meant that new employees had to absorb a large amount of information but lacked opportunities for practice before real world exposure, leading to feelings of overload and difficulty adapting. After training, new employees mainly learned by observing experienced staff. However, the difference in experience and processing speed easily led many to feel pressured, compare themselves to others and lack confidence. When interacting

directly with customers via video call, especially in unforeseen situations or with difficult customers, new employees often feel flustered due to a lack of situational handling skills and professional reflexes.

As a result, order processing times are longer than standard, system operations are slow and the rate of operational errors is higher. According to internal regulations, if an order is incorrect more than twice, the employee will be reprimanded and directly warned by their supervisor, increasing psychological pressure during the probationary period. The combination of performance pressure, high- quality requirements and limited practical experience makes many new employees easily stressed and prone to quitting early if they do not receive appropriate training and support.

### 1.2. Practical Issues and Research Gaps

Although many businesses have invested in internal training, measuring training effectiveness and the relationship between initial training and actual work performance has not been systematically implemented. Training often stops at the level of imparting professional knowledge, while the process of transforming into practical skills, adaptability to the environment and professional mindset is not adequately supported. If the initial phase does not clearly address issues related to the work environment, development opportunities, work pressure and acquired skills, new employees are likely to develop negative attitudes and intentions to leave during their probationary period.

In Vietnam, the issue of work pressure and resignation intentions in the telephone customer service industry has attracted the attention of many scholars. For example, a study published in the Journal of Science of Ho Chi Minh City Open University, surveying 197 telecommunications call center employees, showed that psychological factors and personality traits directly impact service performance and resignation intentions among call center operators. Similarly, another empirical study applying structural modeling (SEM) to 420 tele- sales employees also confirmed that customer rudeness is a core cause of emotional exhaustion leading to decreased performance and a significant increase in resignation intentions. However, current research in Vietnam has only focused on evaluating the call center environment or analyzing customer impact, lacking studies applying human resource management methods to address the problem. Specifically, there are no studies combining the

effectiveness of training and the turnover rate of personnel working via video call in Vietnam. This lack underscores the urgency of this topic. The research at Bellsystem24 Vietnam Inc. was conducted not only to fill the theoretical gap regarding video call customer service in Vietnam, but also to find fundamental solutions through training to help new employees confidently adapt and minimize the risk of early departure from the organization.

Based on the above analysis, the topic "Enhancing the effectiveness of internal training programs for the video call customer service at BELLSYSTEM24 Vietnam Inc." was chosen to address two core issues simultaneously: improving the quality of internal training and reducing the risk of early employee turnover in the Video Call department- a crucial link in the company's digital service development strategy.

## 2. Research Objectives

● General Objective: To improve the effectiveness of internal training programs for video call customer service staff at Bellsystem24 Vietnam Inc.

● Specific Objectives: To achieve the above general objective, the research aims at the following specific goals:

- Analyzing the current state of Bellsystem24 Vietnam's internal training program, including training content, training duration, turnover rate, KI index, etc.

- Evaluating the effectiveness of the internal training program from the perspective of employees working via video call.

- Identifying limitations in the training program that may affect work performance and early turnover rates.

- Proposing solutions to improve training effectiveness and enhance employee engagement with the company.

## 3. Research Subjects and Scope

### 3.1. Research Subjects

Research Subject: Internal training program for customer service staff via video call.

Survey Subjects: Customer service staff via video call at Bellsystem24 Vietnam including:

• Interns: during the first month of internship (whether they intend to become fulltime employees or not whether they will sign a contract to continue working as internships only last one month and must end after the internship period).

• Employees during their probationary period: during the first two months of probation.

• Fulltime employees: those who have signed official contracts (mostly graduates).

### 3.2. Research Scope

Spatial Scope: Bellsystem24 Vietnam Co., Ltd.

Temporal Scope: The research was conducted during the internship period (from December to March). Please specify the timeframe for data collection within the three most recent years (2022- 2024).

The research focuses on analyzing the following specific aspects:

Evaluation of the Training Program: The research assesses the effectiveness of the onboard training program through the relevance of the content to actual work, the level of knowledge and skills acquired, post training confidence, the appropriateness of the training duration and any missing content or training phases that may pose difficulties for employees.

Post training results: Evaluate training effectiveness through performance indicators such as the number of completed orders, processing time and KPI scores.

Employee resignation intentions: Examine the extent to which employees develop resignation intentions after the training period and the relationship between this factor and the effectiveness of the training program without extending to other factors such as salary or benefits.

## 4. Research Methodology

### 4.1. Data Collection Methods

Primary data was collected to directly evaluate the effectiveness of the internal training program for Video Call employees at Bellsystem24 Vietnam Inc. The study used a short questionnaire (under 15 questions) designed on Google Form and distributed to employees working in this department. The survey focused on: the effectiveness of the training program, the relevance of training content to actual work,

the duration of the program, the level of readiness after training and suggestions for improvement, ...

The scales used in the survey primarily utilize a system of multiple choice and hierarchical questions to accurately quantify the perceptions and attitudes of the research subjects.

The survey yielded 32 valid responses which were used as the basis for analyzing and evaluating the effectiveness of the internal training program within the company.

Secondary data was collected from internal documents and company performance reports to objectively analyze the current state of training and measure its effectiveness. This information includes: the number of training programs organized annually, training content, duration, format, training supervisor and periodic retraining policies, ...

**4.2. Data Processing Methods**

For primary data from questionnaires, responses will be aggregated and coded on Google Forms and Excel to calculate frequency, percentage and mean values for each observed variable.

For secondary data, performance indicators will be aggregated and standardized annually for comparison and trend analysis.

**4.3. Data Analysis Methods**

The study uses descriptive statistics to analyze survey data and performance indicators and applies content analysis to interview data to identify limitations of the training program.

## 5. Novel Contributions of the Thesis

The thesis analyzes the current state of internal training and the resulting turnover rate for the Video Call customer service department at Bellsystem24 Vietnam Inc. during the period 2022- 2024.

In addition to using secondary data sources, the study also conducted a field survey to assess the perceptions and job satisfaction levels of employees (including interns, probationary employees and permanent employees) after completing the onboarding training course at Bellsystem24 Vietnam. The research results clearly reflect the current limitations in training, especially the heavy emphasis on theory,

insufficient practical time and lack of skills to help new employees adapt to a high-pressure environment.

Furthermore, the study proposes several solutions to improve the training program, making it more relevant to the practical conditions and specific characteristics of the Video Call channel, rather than offering purely theoretical solutions. These solutions can serve as a practical reference to help companies optimize training costs and minimize employee turnover rates in the future.

## 6. Structure of the Thesis

Besides the introduction and conclusion, the thesis is structured into three chapters:

• Chapter 1: Theoretical and practical basis of internal training in enterprises.

• Chapter 2: Analysis of the current state of internal training programs for customer service staff via Video Call at Bellsystem24 Vietnam Inc. in the last three years (2022-2024)

• Chapter 3: Orientation, objectives, and proposed solutions to improve the effectiveness of internal training programs to reduce employee turnover at Bellsystem24 Vietnam Inc. according to a short term to long term roadmap.

# B. CONTENT

# CHAPTER 1: THEORETICAL AND PRACTICAL FOUNDATIONS OF THE EFFECTIVENESS OF INTERNAL TRAINING FOR CUSTOMER SERVICE STAFF VIA VIDEO CALL

## 1.1 Theoretical foundations of the effectiveness of internal training for customer service staff via video call

### *1.1.1. Basic concept of the effectiveness of internal training for customer service staff via video call*

**a. Basic concepts of training and internal training**

Training is understood as an organized and goal- oriented process aimed at equipping employees with the knowledge, skills and competencies necessary to perform their jobs effectively. Training has been approached from different perspectives in the literature. According to Noe (2020), training refers to a planned effort by a company to facilitate employees' learning of job- related competencies. Building on this core perspective, Armstrong and Taylor (2020) describing training as the systematic application of formal processes to impart knowledge and help individuals acquire the skills required to perform their roles efficiently.

Based on these definitions, corporate training can be differentiated not only in content but also in its organizational delivery methods. According to Armstrong and Taylor (2020), employee training can be classified based on the provider and learning environment. From the provider perspective, training includes internal training, delivered by managers, HR specialists or experienced employees within the organization and external training, conducted by educational institutions or external consultants. From the learning environment perspective, training may take place on the job or off the job, utilizing methods such as coaching, mentoring, job rotation, workshops and e-learning.

Internal training also facilitates direct knowledge sharing between experienced employees and trainees, enabling organizations to quickly identify skill gaps and adjust training content when necessary. (Jacobs, 2003)

**b. The concept of customer care and customer care through video calls**

The concept of customer care has been approached by many organizations and scholars from different perspectives but all aim towards the common goal of enhancing customer experience and satisfaction.

The concept of customer care has been approached by scholars from various perspectives but all converge on the common goal of enhancing customer experience and satisfaction. According to Lovelock and Wirtz (2021), customer service is defined as the task- oriented activities that involve interactions with customers to meet their specific needs and expectations. Complementing this view, Zeithaml et al. (2018) emphasize that customer expectations are dynamic and vary across different service encounters. Therefore, service providers must profoundly understand these expectations and strive to exceed them, as the ultimate objective of customer care is to foster long term satisfaction and loyalty.

Currently, customer service is delivered through diverse communication channels and digital technologies. Within the modern contact center environment, video calls have emerged as a highly effective interaction channel. Viewed through the lens of Media Richness Theory (Daft & Lengel, 1986), video calls offer a richer medium compared to traditional voice or text channels because they transmit multiple visual and vocal cues simultaneously. This synchronous, face to face digital interaction significantly reduces ambiguity, enhances visual clarity and builds deeper relational trust between the customer and the service representative.

**c. Training effectiveness concept**

Bramley (1997) viewed training effectiveness as a measure that evaluates the extent to which training leads to improvements in employees' knowledge, skills and behavioral patterns within the organization as an outcome of the training process.

According to Morrison and Hammon (2000), the effectiveness of training can be determined by examining employees' performance over a certain period after the training has been implemented.

In addition, broader training evaluation frameworks such as Kirkpatrick's model suggest that effectiveness should not only be assessed at the learning level but also at behavioral and results levels, reflecting the actual transfer of training to job performance.

Thus, training effectiveness can be understood as the degree to which training programs generate positive changes in employees' competencies and behaviors which are subsequently reflected in their job performance over time.

*1.1.2. Classification, characteristics, and role of internal training*

**a. Classify the effectiveness of internal training**

Kirkpatrick's Four Level Model is one of the most widely used frameworks for evaluating training effectiveness. The model was first introduced by Donald L. Kirkpatrick and later developed with contributions from Kirkpatrick and Kirkpatrick (2006). It evaluates training outcomes across four hierarchical levels, ranging from immediate learner responses to organizational results.

Level 1: Reaction Assessment- Learner Reception and Interaction

At this level, BellSystem24 assesses learner responses through their level of participation, initiative and interaction during training sessions. Instead of passively recording feedback at the end of the course, trainers directly observe learners' attitudes and reactions during training sessions. Learners' hesitation or confidence in handling hypothetical and complex situational questions is an initial measure of their suitability and interest in the high- pressure nature of video call work.

Level 2: Learning Assessment- Measuring the Transfer of Fundamental Knowledge and Skills

Bellsystem24's learning assessment is extremely rigorous from the very beginning, divided into two core focuses:

Voice and pronunciation screening: The focus of the video call service is direct communication with customers via video call. Therefore, trainees must undergo a voice and pronunciation test. Through reading designated texts, the training department categorizes and identifies pronunciation errors due to regional accents and provides a timeframe for them to correct them. After the allotted time, individuals who do not meet the entry standards will be eliminated from the training program, optimizing the company's training costs and avoiding wasted time for both parties.

Assessing problem solving skills: After passing the voice screening round, trainees are tested on their critical thinking and problem- solving abilities through common customer service industry questions about handling real life customer situations they might encounter. The internal training department acts as a reviewer,

analyzing the strengths and weaknesses of each trainee's proposed solution, thereby refining their service thinking to align with the company's standard operating procedures.

Level 3: Behavior Assessment- Transforming Theory into Practical Work

This is a crucial stage (on the job training) to measure whether trainees can apply what they have learned in a real- world environment.

After the theoretical course, to officially pass the on- the- job training program, trainees must take a final practical test. Supervisors will randomly select 5 calls made by the trainees to grade based on the internal QA scale.

Only employees who achieve a standard overall score (above 7/10) will be allowed to participate in the official call practice. Individuals who do not meet the requirements for system operation or image, emotion control skills will have to participate in a retraining cycle.

Level 4: Results Evaluation- Overall Performance and Human Resource Retention

The ultimate effectiveness of the training program is measured through the actual contributions of personnel to the organization's operational goals. At Bellsystem24, this level is quantified through the following indicators:

Key Indicators (KI): Employees are monitored and evaluated monthly after signing their official contracts. This indicator includes both processing performance (call time, error rate) and work attitude.

Supplementary Training Policy: KI data is used to establish retraining classes in the following month for underperforming employees, ensuring that service quality is not disrupted.

The Kirkpatrick model provides a comprehensive and systematic approach to training evaluation and is particularly suitable for assessing the effectiveness of internal training programs in service- oriented organizations, including customer service positions requiring high levels of interaction such as video call customer service.

**b. Characteristics of internal training for customer service staff via video call**

The shift to a video mediated communication environment requires organizations to redesign the entire focus of their internal training programs.

According to Larivière et al‘s (2017) research on the service encounter 2.0 model, the skill set of frontline employees is no longer limited to technical knowledge or voice skills but requires digital presence and the ability to multitask in real time.

Particularly from the perspective of interaction psychology, Bailenson (2021) asserts that video communication creates a state of nonverbal overload. Unlike traditional telephone call centers, video call personnel must constantly maintain eye contact through the camera lens, tightly control facial expressions and face the pressure of constant visual surveillance. Therefore, Karl et al. (2022) emphasizes that onboarding training programs must equip personnel with specific virtual communication competence. This includes training in body language control in confined spaces, visual etiquette and emotional management methods to minimize fatigue during the first few months of employment. Therefore, onboarding and training programs should include guidance on virtual communication practices, professional online behavior and strategies for managing fatigue and maintaining well- being in a video- based work environment.

**c. Role of internal training in the enterprise**

Internal training is not simply about imparting professional knowledge and skills to employees, it also plays a strategic role in enhancing organizational capabilities. In a competitive and rapidly changing environment, internal training programs are essential.

While external training provides general knowledge, internal training equips employees with specialized skills and a competitive advantage. From a strategic management perspective, Hatch and Dyer (2004) affirm the role of training as a firm specific human capital. Unlike external courses that only provide general foundational knowledge, internal training directly intervenes in communicating the organization’s unique processes, culture and technology systems. This close integration creates a competency barrier that competitors in the market cannot easily replicate or purchase.

In terms of performance, the comprehensive research by Aguinis and Kraiger (2009) indicates that internal training acts as a dual catalyst. At the micro level, it directly narrows the skills gap, increasing the accuracy and speed of individual work processing. At the macro level, internal training plays a supportive role in helping new

employees quickly internalize the behavioral norms, core values and service mindset that the organization is pursuing.

For customer service employees, especially during the probationary period, internal training is crucial in supporting the adaptation process to the work environment and reducing the risk of early departure. Particularly during the integration phase, internal training plays a key role in controlling employee turnover rates. According to empirical research by Bauer et al. (2007), well- structured internal training programs help new employees clearly define role expectations and enhance self- efficacy. Equipped with practical problem solving methods from experienced colleagues, new employees are better able to withstand reality shock, thereby significantly reducing stress and the intention to leave the organization in the first few months.

*1.1.3. Content of internal training*

**a. Market research**

Market research is the process of collecting, analyzing and interpreting information about a specific market including target customers, competitors and industry trends, to support the strategic decisions of a business. According to Kotler & Keller (2016), market research provides organizations with systematic insights about customer needs, preferences and behaviors as well as external factors influencing demand.

Additionally, Malhotra (2015) emphasizes that market research helps businesses make data- driven decisions including product development, service improvement and designing training programs that meet the needs of employees and customers.

**b. Secondary data**

Secondary data refers to information that has been previously collected by organizations or prior research, used to provide context, benchmark standards and support result evaluation. According to Saunders et al. (2019), secondary data is data collected by others for purposes other than the current research and can provide context or benchmark comparisons. Secondary data can include internal company reports, training program materials as well as academic research and industry reports used for comparison and performance standard identification.

**c. Primary data**

Primary data was collected directly from staff and lecturers through surveys, in- depth interviews and classroom observations, aiming to measure the level of knowledge acquisition, skills, attitudes and learner satisfaction. According to Kirkpatrick & Kirkpatrick (2016), combining primary data with secondary data helps comprehensively assess the levels of training effectiveness, from learner reactions, improvements in knowledge and skills, to the ability to apply them in practical work and the impact on organizational performance.

*1.1.4. Factors influencing internal training of business*

In evaluating the effectiveness of internal training programs, particularly for high interaction roles like video call customer service, the core research problem often lies in the gap between training implementation and the actual measurement of performance outcomes (Salas et al., 2012). The process of investigating this gap is influenced by a multitude of variables, which can be broadly categorized into internal and external factors.

Regarding internal factors, the intrinsic elements of the training ecosystem directly dictate program efficacy. According to Noe (2020), these factors encompass the instructional design such as the content structure, the quality of materials and assessment tools as well as trainee characteristics, specifically their motivation, readiness and attitudes toward learning. The alignment of these internal variables is critical, as they determine the accuracy of knowledge acquisition and the subsequent results of training evaluation.

Conversely, external factors pertain to the broader organizational and market environment. Burke and Hutchins (2007) highlight that variables such as the organizational transfer climate, resource limitations (time, personnel and budget constraints) and overarching company policies significantly impact how training is applied in the workplace. Furthermore, in the context of digital customer service, shifting market trends and evolving customer expectations for video mediated interactions act as external pressures that dictate the relevance of training solutions. Thus, recognizing the interplay between internal instructional design and external environmental constraints ensures that the evaluation of training effectiveness remains

both theoretically sound and practically feasible in a dynamic business context (Burke & Hutchins, 2007; Salas et al., 2012).

## 1.2. The practical basis of internal training

### *1.2.1. Experiences of enterprises addressing similar problems*

Practical experience from Teleperformance company, a global leader in BPO services and customer experience management provides a prime example of building internal training programs and in- depth competency development pathways for its workforce. With tiered advanced training programs such as the Data Analytics and AI Internship program in collaboration with Gijima and Microsoft, TP focuses on equipping trainees with practical AI and data skills, supporting responsible AI application and providing real world project experience. This ensures 100% of trainees achieve international professional certifications, enabling successful transition to fulltime positions. Simultaneously, a specialized customer service skills training framework, in partnership with financial partners such as the digital bank Monzo, emphasizes a systematic, hands on training and mentoring process, transforming trainees' theoretical knowledge into highly effective operational skills for the marketplace.

The core element driving the breakthrough in Teleperformance's internal training system is the establishment of a program structure that harmoniously combines the precision of Artificial Intelligence with the profound empathy of Emotional Intelligence. TP's training program does not view technology and people as opposing entities but rather shapes them into powerful synergistic factors to enhance service quality and personalization. This training process is clearly divided into three core pillars: in- depth technical training (AI Training) to help employees identify patterns and master digital tools, change management and integration support through real time coaching, immediate behavioral feedback and technological solutions for flexible language and tone correction and finally optimizing collaboration skills between humans and AI. This comprehensive training framework helps personnel master technology to automate repetitive tasks and reduce manual workload thereby freeing up operational pressure and creating space for call center agents to focus on developing their skills in handling complex situations that require high level judgment and sensitive emotional connection with customers.

*1.2.2. Overview of some related studies*

For service industries, human resources are always one of the core factors requiring significant investment for business development. A classic study by Rosemary Batt (2002), published in the prestigious Academy of Management Journal, conducted a large- scale empirical survey at call centers and demonstrated that highly invested human resource policies are crucial. The study showed that human resource management practices focused on skill development, empowerment and long term investment in employees especially intensive internal training programs have a direct relationship with the turnover rate of call center agents. The author points out that equipping employees with situational handling skills and enhancing their autonomy in the workplace through training not only increases operational productivity but also strongly strengthens their commitment to the organization. In agreement with this perspective, the systematic research by Aksin et al. (2007) in the journal Management Science on modern call center operations management emphasized that issues of human resource management, employee behavior and operational quality are becoming increasingly important in modern call center management.

From the perspective of knowledge transfer and labor psychology, the review by Burke and Hutchins (2007) in Human Resource Development Review affirms that the effectiveness of internal training depends heavily on the transfer context, where the support of management and colleagues acts as a catalyst to transform theory into practical behavioral responses.

In the Vietnamese academic context, empirical evidence also shows conclusions that are fully consistent with international human resource management principles. According to Tran Kim Dung (2020) on human resource management, for young workers, professional confidence is most firmly built through structured internal training processes where support from frontline supervisors helps new employees quickly adapt to the work environment and improve job performance. All these official and publicly available studies have created a robust scientific argument, affirming that internal training is the backbone of a stable human resource strategy in the high-pressure call center industry.

These studies are important reference materials for researching the current situation and proposing solutions to improve the effectiveness of internal training programs to reduce employee turnover at Bellsystem24 Vietnam.

Although Bellsystem24 has established a basic training framework, the current program has not yet fully exploited its potential to enhance learning effectiveness and long term career development for employees. Bellsystem24 needs to restructure its training programs to increase participation, expand training content and improve the learning experience for employees.

*1.2.*3. *Lessons learned for the specific research context*

Minimize Theoretical Lectures to Increase Practical Training:

One of the key lessons in human resource development strategies for call centers is eliminating one- way theoretical instruction to focus on practical application. Replacing passive reading materials with activities such as actual workplace tours, case studies and mock interviews helps new employees become familiar with the job faster. Batt's (2002) empirical research also demonstrates that human resource policies focusing on developing practical skills and empowering call center operators are directly related to early turnover rates. This means that increasing direct interaction time plays a crucial role in forming language reflexes and building practical adaptability for employees during the initial integration phase.

Optimizing knowledge acquisition by breaking down the training path:

The unique characteristics of the customer service industry require training programs to be designed flexibly to avoid employees having to absorb too much knowledge in a short period of time. Many large BPO companies have now shifted from long, intensive training models to short learning modules, organized by specific topics and combined with online learning support tools such as integrating human resources with technical training (Teleperformance, 2025).

According to Aksin et al. (2007), improving the capabilities of call center operators cannot be achieved through rote learning courses but needs to be done in stages, closely linked to the actual work process. Breaking down training content helps employees absorb knowledge more easily especially for tasks that are constantly changing and updating. At the same time, this method also helps reduce learning

pressure, increase knowledge retention and limit discouragement or quitting during the initial period of employment.

Strengthen organizational support and measure effectiveness:

The performance of call center operators depends greatly on the nature of the transition from the classroom to the real- world work environment. Establishing supportive and empathetic training programs combined with in- depth mentoring and practical advice significantly alleviates the pressure of handling large workloads. Studies by Burke and Hutchins (2007) and Tran Kim Dung (2020) in Vietnam both agree that the professional confidence and learning motivation of young workers are most strongly reinforced when supported by frontline managers and a network of colleagues. Replacing the error- finding mechanism with a one- on- one mentoring system at the workstation transforms periodic training sessions into a supportive environment, reducing stress and increasing employee engagement with the organization.

Building training roadmaps based on actual employee needs:

According to Nguyen Ngoc Quan and Nguyen Van Diem (2020), the first step in building a training program is identifying training needs through organizational, job and employee analysis. Based on this, businesses can then determine the correct training objectives, select appropriate training content and methods.

This experience is particularly significant for BPO businesses and customer service centers like Bellsystem24 Vietnam where employees are frequently under pressure regarding KPIs, call processing times and service quality requirements. Instead of building training programs based on a fixed template, businesses need to regularly survey the actual difficulties employees face at each stage of their work to adjust the training content. Training that stems from real- world needs will help learners easily absorb knowledge, improve their ability to apply it to their work and bridge the gap between theory and the actual operating environment.

# CHAPTER 2: CURRENT SITUATION OF THE RESEARCH PROBLEM AT THE STUDY SITE IN AT LEAST THE PAST YEAR

## 2.1. Overview of Bellsystem24 Vietnam Inc.

### *2.1.1. Overview of the enterprise's business activities*

**Figure 2.1: Logo of Bellsystem24 Vietnam**

*(Source: Bellsystem24 Vietnam)*

- Company Name: BELLSYSTEM24 VIETNAM INC.
- Abbreviation: BELL24 VN INC.
- Establishment Date: July 28, 2006
- Head Office: Ground floor, CT2 building, Yên Hoa Parkview, 03 Vu Phạm Ham, Cau Giay, Hanoi
- Phone: 02435659596
- Website: https://bell24vietnam.vn/
- Representative: Hirano Takayuki
- Tax Code: 0102001517

*2.1.2. History of formation and development*

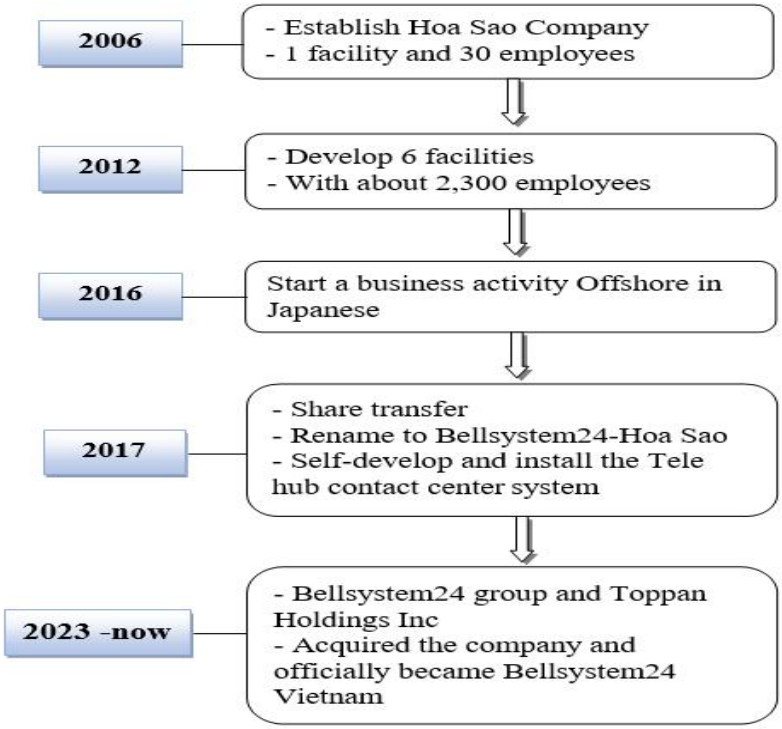

**Figure 2.2. History of formation and development of Bellsystem24 Vietnam**

*(Sources: Bellsystem24 Vietnam, 2024)*

Bellsystem24 Vietnam, formerly Hoa Sao Company was established in 2006 with an initial scale of 1 facility and approximately 30 employees. In the subsequent development phase by 2012, the company had significantly expanded to 6 facilities and approximately 2,300 employees, a strong increase in scale. In 2016, the business began developing its overseas Japanese language service segment, expanding its market and improving its capacity to serve international customers. By 2017, the company underwent a share transfer and changed its name to Bellsystem24- Hoa Sao, while proactively developing and deploying the Telehub contact center system to improve operational efficiency. A significant step forward occurred from 2023 to the present when Bellsystem24 Group and Toppan Holdings Inc. Having completed the acquisition of the company and officially renamed it Bellsystem24 Vietnam, the company affirms its position and development direction in the customer service and BPO sectors in Vietnam.

*2.1.3. Vision, mission, and core values*

*a. Vision*

Bellsystem24 Vietnam aims to become one of the leading companies in the field of Contact Center and BPO services in Vietnam. The company emphasizes its commitment to providing service solutions based on the simultaneous optimization of three factors: operating processes, human resources and technology. In its operations, Bellsystem24 Vietnam strives to combine Japanese management values and experience with local resources and practical conditions in Vietnam, in order to enhance service delivery efficiency. By maintaining a high level of service quality, the company expects to deliver value beyond expectations to its partners and maximize customer satisfaction.

*b. Mission*

Bellsystem24 Vietnam aims to contribute to the prosperity of society through innovation and connection by providing leading customer care solutions and delivering exceptional value to both partners and customers.

This mission reflects Bellsystem24 Vietnam's sustainable development orientation where service quality and customer experience are considered top priorities.

*c. Core Value*

In addition, Bellsystem24 Vietnam's activities are guided by five core values: the power of dialogue, diversity, uniqueness, for social prosperity, commitment to success.

These core values not only guide Bellsystem24 Vietnam's development strategy but are also clearly reflected in the corporate culture, operational processes and methods of providing customer care services especially in forms of direct interaction such as customer support via video calls.

*2.1.4. Business activities*

Bellsystem24 Vietnam is a company operating in the service sector specializing in Business Process Outsourcing (BPO) as well as a provider of Contact Center solutions- professional customer care centers. This is a business model belonging to non-manufacturing services, supporting other companies in optimizing customer care processes, sales and other support operations.

Bellsystem24 Vietnam offers a comprehensive service ecosystem to clients across various industries, including both core services and ancillary services:

- Contact Center Operations (Customer Care and Call Center Services): End- to-end customer care, order processing, reservation management, telesales or telemarketing, generating potential leads, surveys and information verification.
- BPO Services (Business Process Outsourcing): Services such as content moderation, data entry and processing, technical support helpdesk, AI training, back- office and field force.
- Research and Survey: Conduct market research and customer surveys across various industries.
- Support Services: Includes Contact Center systems, CRM systems, AI applications, recruitment services and employee training.

Bellsystem24 Vietnam focuses on providing business support service solutions and enhancing customer experience while allowing partner companies to focus on their core activities. Accordingly, the company acts as an outsourcing service provider and professional customer care center, serving multiple industries such as finance and banking, insurance, e- commerce, tourism, real estate, telecommunications and healthcare.

*2.1.5. Organizational structure*

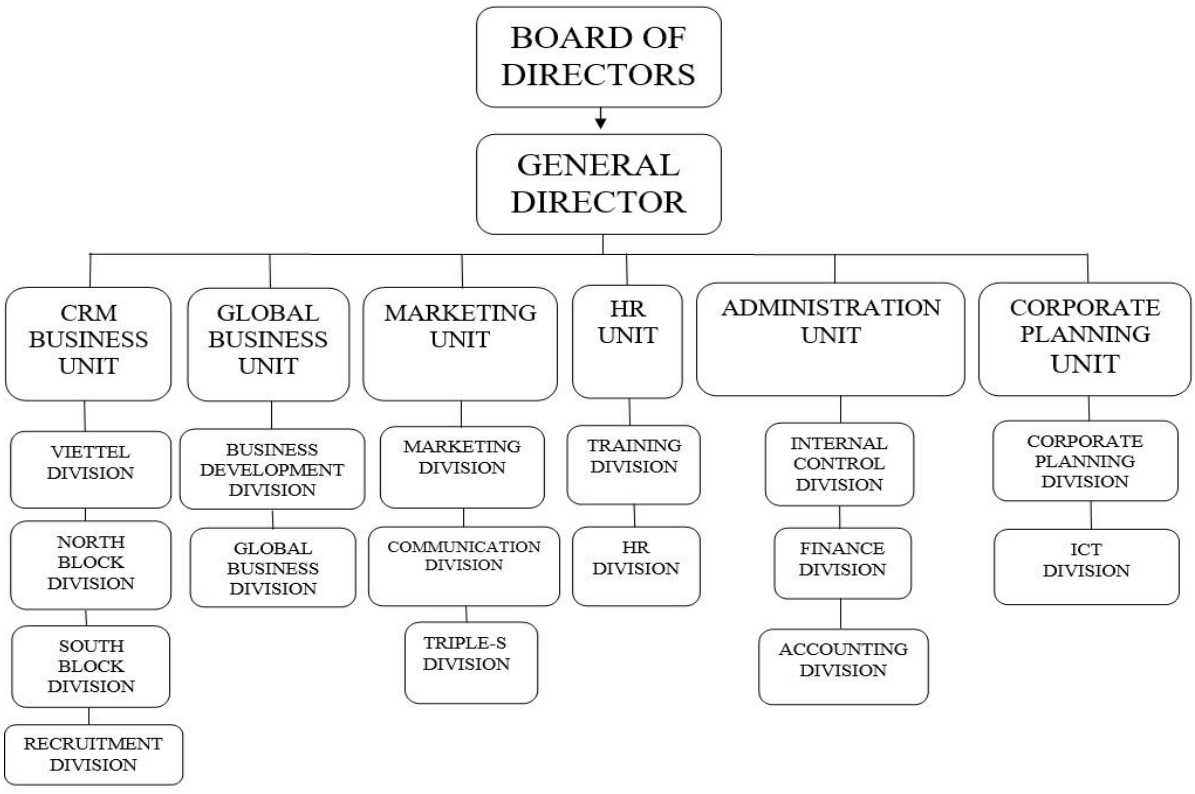

**Figure 2.3: Organizational Structure of Bellsystem24 Vietnam Inc.**

*(Source: Bell24vietnam, 2024)*

The board of directors is responsible for defining the long- term goals and vision of the enterprise. In addition, the board approves key strategies, supervises the executive management and ensures that the business operates transparently, efficiently and in alignment with the interests of shareholders as well as other stakeholders. Furthermore, the board is also responsible for establishing risk management systems, internal controls and ensuring legal compliance thereby safeguarding the sustainability and reputation of the organization in the long term.

The General Director is responsible for tasks such as planning and developing strategies. In addition, they are accountable for major decisions related to the company's operations and activities. The General Director also directly manages and oversees the internal functioning of the business as well as supervising and evaluating the performance of each department.

The CRM Business Unit is a specialized unit responsible for managing and nurturing customer relationships while also serving as an outsourced customer service provider for the company's strategic partners. This unit specifically handles activities directly related to customers such as answering calls, resolving inquiries, handling complaints and supporting customers throughout their service usage. Within the CRM Business Unit, there are smaller divisions organized by region and function to manage specific projects and partners such as the Viettel division, north block division, south block division and recruitment division.

The Global Business Unit is responsible for developing international markets, seeking new clients and managing projects with foreign elements. This unit includes departments such as the business development division and the global business division, contributing to expanding operational scope and enhancing the company's competitiveness in the global service market.

The Marketing Department is responsible for building and developing the brand image, implementing communication activities and supporting business operations. This department includes the marketing division, communication division and triple-s division, working together to enhance brand awareness and attract potential customers.

The Human Resources unit plays an important role in managing human resources, including recruitment, training and staff development. This unit includes the

HR division and the training division, with the training division responsible for organizing internal training programs, particularly professional training for customer service staff to ensure service quality.

In addition, the Administrative Division is responsible for internal control, finance and accounting activities through departments such as the internal control division, finance division and accounting division, contributing to ensuring transparency, compliance and stability in the company's operations. The Corporate Planning Division which includes the corporate planning division and ICT division, is tasked with developing strategic plans, managing information technology systems and supporting digital transformation across the company.

Overall, the organizational structure of Bellsystem24 Vietnam is relatively well-established, reflecting a clear division of responsibilities between functional departments and business units.

*2.1.6. Financial situation*

The balance sheet is one of the most important tools for analyzing the overall financial situation of a business at a specific point in time. By analyzing the indicators in the balance sheet over several years, it is possible to assess changes in the scale of assets, the financial base and the level of financial automation of the business. Using data from the period 2022-2024, this section will focus on analyzing the balance sheet of Bellsystem24 Vietnam including key indicators such as total assets, current assets, long-term assets, liabilities and owners' equity helping to determine the business's financial performance trends.

**Table 2.1. Balance Sheet of Bellsystem24 Vietnam for the Period 2022-2024**

*(Unit: Billion VND)*

| Items | 2022 | 2023 | 2024 | Comparison 2023/2022 | | Comparison 2024/2023 | |
|---|---|---|---|---|---|---|---|
| | | | | Difference | Rate (%) | Difference | Rate (%) |
| **Total Assets** | 28.50 | 29.20 | 28.75 | 0.70 | 102.46 | -0.45 | 98.46 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| **Short-term Assets** | 17.50 | 18.10 | 17.65 | 0.60 | 103.43 | -0.45 | 97.51 |
| **Long-term Assets** | 11.00 | 11.10 | 11.10 | 0.10 | 100.91 | 0.00 | 100.00 |
| **Liabilities** | 11.80 | 12.20 | 11.50 | 0.40 | 103.39 | -0.70 | 94.26 |
| **Equity** | 16.70 | 17.00 | 17.25 | 0.30 | 101.80 | 0.25 | 101.47 |

*(Source: Bellsystem24 Vietnam, 2024)*

Based on the balance sheet for the 2022-2024 period, it can be seen that BellSystem24 Vietnam's financial situation is relatively stable and shows positive signs of risk mitigation.

Specifically, the company's total assets experienced slight fluctuations, increasing from 28.50 billion VND in 2022 to a peak of 29.20 billion VND in 2023, before mildly decreasing to 28.75 billion VND in 2024. Regarding the asset structure, short term assets followed a similar trend, rising from 17.50 billion VND to 18.10 billion VND in 2023, then dropping to 17.65 billion VND in 2024. Meanwhile, long term assets remained highly stable throughout the period (starting at 11.00 billion VND in 2022 and maintaining 11.10 billion VND in both 2023 and 2024) showing that the company maintains a solid and consistent foundation of facilities to support business operations without significant fluctuations in long term investments.

Regarding the capital structure, there is a very positive shift. Liabilities initially increased from 11.80 billion VND to 12.20 billion VND in 2023, but notably decreased to 11.50 billion VND in 2024. This indicates that the company is actively reducing its reliance on borrowed capital thereby decreasing financial leverage and alleviating debt repayment pressure. At the same time, equity has demonstrated steady and continuous growth, from 16.70 billion VND in 2022 to 17.00 billion VND in 2023, and reaching 17.25 billion VND in 2024. This reflects the company's strong ability to accumulate retained earnings and indicates a significant improvement in financial autonomy.

The combination of declining liabilities and rising equity demonstrates a safer capital structure. Although current assets slightly decreased in the last year, it aligns

reasonably with the reduction in debt, meaning the financial situation remains firmly under control.

In summary, BellSystem24 Vietnam during this period maintains a safe, stable and improving financial position. The reduction in debt and continuous growth in equity highlight enhanced financial health and lower financial risk. Moving forward, the company should continue to manage its asset utilization efficiently while taking advantage of its growing financial autonomy to ensure sustainable development.

*2.1.7. Business performance*

To evaluate the performance of Bellsystem24 Vietnam during the 2022-2024 period, this study focuses on analyzing key financial indicators reflecting the company's business results. Specifically, the following section presents and analyzes the financial statements over the years. Through these figures, the study aims to clarify the trends in business performance and profitability of the company.

**Table 2.2. Financial statement of Bellsystem24 Vietnam for the Period 2022-2024**

*(Unit: Billion VND)*

| Items | 2022 | 2023 | 2024 | Comparison 2023/2022 | | Comparison 2024/2023 | |
|---|---|---|---|---|---|---|---|
| | | | | Difference | Rate (%) | Difference | Rate (%) |
| **Net revenue from sales and service provision** | 55.50 | 56.80 | 54.20 | 1.30 | 102.34 | -2.60 | 95.42 |
| **Net profit from business operations** | 6.90 | 7.25 | 6.60 | 0.35 | 105.07 | -0.65 | 91.63 |
| **Total accounting profit before tax** | 7.00 | 7.40 | 6.85 | 0.40 | 105.71 | -0.55 | 92.54 |
| **Profit after tax** | 5.60 | 5.95 | 5.45 | 0.35 | 106.25 | -0.50 | 91.60 |

*(Source: Bellsystem24 Vietnam, 2024)*

During the 2022-2024 period, the business performance of BellSystem24 Vietnam experienced fluctuations, characterized by solid growth in 2023 followed by a slight contraction in 2024. Specifically net revenue from sales and service provision increased from 55.50 billion VND in 2022 to a peak of 56.80 billion VND in 2023 (an increase of 2.34%) before dropping to 54.20 billion VND in 2024 (down by 2.60 billion VND, equivalent to 95.42% of the previous year). This indicates that while the core business was historically strong, it faced recent structural shifts

Consistent with revenue trends, profit indicators peaked in 2023 before narrowing in 2024. Net profit from business operations rose from 6.90 billion VND in 2022 to 7.25 billion VND in 2023 before falling to 6.60 billion VND in 2024. Profit after tax followed the exact same trajectory, reaching 5.95 billion VND in 2023 and ending 2024 at 5.45 billion VND.

Overall, the business results table shows that BellSystem24 Vietnam had a period of healthy growth from 2022 to 2023 but is currently in the process of transforming its business model. The decline in revenue and profits in 2024 is primarily a short term effect due to strategic investments and restructuring, laying a solid groundwork for higher operational efficiency and sustainable growth in the future.

## *2.2 Analysis of the Current State*

### *2.2.1. Secondary data analysis*

To provide a comprehensive understanding of the current internal training system at Bellsystem24 Vietnam, this section analyzes secondary data collected from company reports, training documents and operational statistics during the period 2022-2024. The analysis focuses on three main aspects: the structure and implementation of internal training programs, the performance outcomes of employees after training and employee turnover trends. Through these indicators, the study aims to evaluate how effectively the training system prepares employees for their jobs and identify potential issues related to employee adaptation, performance and retention. The findings from the secondary data analysis serve as an important foundation for the primary survey and the identification of training limitations discussed in the following sections.

**Table 2.3. Overview of Internal Training Programs at Bellsystem24 Vietnam**

| Training Program | Frequency | Duration | Content | Trainers | Target participants |
|---|---|---|---|---|---|
| **Initial Training** | About 2 classes every 3 months | About 10 days | Job knowledge, system usage, customer handling skills, basic processes | HR staff, Supervisors | New employees |
| **Information Security Training** | When new videocall project is launched | Short session (varies) | Data protection, customer information confidentiality, company regulations | Internal trainers or supervisors | All employees involved in new projects |
| **Retraining** | Monthly | Short sessions | Review of job knowledge, performance improvement, error correction | Team leaders or supervisors | Employees with low performance |
| **Advanced Training** | After about 2 months of working | 3 or 4 days | Advanced customer handling, enterprise service processes | Supervisors or experienced staff | Employees who passed initial stage |

*(Source: Author's compilation based on Bellsystem24 Vietnam, 2026)*

At Bellsystem24 Vietnam, the internal training system is implemented comprehensively and according to each stage of employee develop including

onboarding training, information security training, retraining and advanced training. These programs aim not only to equip employees with professional knowledge but also to help them adapt to the practical work environment in the customer service field.

Onboarding training is organized with a frequency of approximately two classes every three months lasting about 10 days. The training content focuses on job knowledge, system usage, customer handling skills and basic procedures. The program is directly taught by internal staff including administrative personnel or operational supervisors. However, in practice the effectiveness of this program is limited with a high turnover rate after training and during the initial employment period. This clearly reflects the difficulties employees face in adapting to the actual work as well as raising concerns about the relevance of training content to job requirements.

In addition, Bellsystem24 Vietnam implements an online information security training program on the Bellsystem24 Vietnam e-learning system whenever new personnel are video called. This is a mandatory program for all employees before joining a project to ensure compliance with regulations on protecting customer data and information. The program is structured according to a clear roadmap, consisting of three main courses: a personal data protection course with 6 theoretical chapters and a final exam, an information security course with 9 theoretical chapters and an exam and an operational information security course with 3 theoretical chapters and an assessment exam. The online learning format allows employees to be proactive in terms of time and progress but also places a high demand on self- discipline during the learning process. In cases where learners only complete training superficially, the effectiveness of knowledge acquisition may not be truly in- depth especially when the content is primarily theoretical and lacks direct interaction.

In addition, the company implements monthly retraining for employees with low key performance indicators. The retraining content mainly focuses on reviewing knowledge, improving skills and correcting errors in the work process. Although this program helps improve performance, its frequent organization can also create psychological pressure on employees especially those who have already struggled with their work.

For advanced training for corporate clients, the program is held approximately every two months and lasts 3- 4 days. The training content focuses on handling more

complex situations and procedures for serving corporate clients. The training time is relatively short because employees have already been introduced to this content during the initial training phase and have practical experience in the job. However, in reality many employees left the company before reaching this stage, resulting in missed opportunities for advanced training programs

Notably, for both onboarding training and corporate client training, the company has a policy of subsidizing training costs for participants during their training days depending on the specific program. This demonstrates the company's significant investment in training and human resource development.

However, despite the well- designed training system and clear roadmap, implementation reveals a gap between training and actual job requirements. The high turnover rate immediately after training and within the first two months of employment indicates that the training program has not truly prepared employees to face work pressures. This highlights the need to re- evaluate the content and methods of training to improve its practicality and effectiveness in retaining employees.

**Table 2.4. Video Call Workforce by Tenure and KI for the Period 2022-2024**

*Unit: People*

| Year | Seniority | KI Excellent | KI Good | KI Average | KI Poor | Total |
|---|---|---|---|---|---|---|
| **2022** | Over 12 months | 18 | 3 | 1 | 0 | 22 |
| | 6-12 months | 12 | 2 | 1 | 0 | 15 |
| | 2-6 months | 14 | 3 | 1 | 0 | 18 |
| | Under 2 months | 8 | 6 | 6 | 0 | 20 |
| | Total 2022 | 52 | 14 | 9 | 0 | 75 |
| **2023** | Over 12 months | 21 | 2 | 2 | 0 | 25 |
| | 6-12 months | 10 | 2 | 1 | 0 | 13 |
| | 2-6 months | 16 | 2 | 1 | 0 | 19 |
| | Under 2 months | 10 | 13 | 13 | 2 | 38 |
| | Total 2023 | 57 | 19 | 17 | 2 | 95 |
| **2024** | Over 12 months | 12 | 10 | 5 | 0 | 27 |
| | 6-12 months | 5 | 7 | 5 | 0 | 17 |

| | | | | | | |
|---|---|---|---|---|---|---|
| | 2-6 months | 4 | 5 | 2 | 0 | 11 |
| | Under 2 months | 5 | 15 | 18 | 0 | 38 |
| | Total 2024 | 26 | 37 | 30 | 0 | 93 |

*(Source: Author's compilation based on Bellsystem24 Vietnam, 2026)*

The data table shows that the staffing structure at Bellsystem24 Vietnam differs significantly across seniority groups and also reflects a notable correlation between length of service and performance evaluation (KI).

Over all three years, the group of employees with more than 12 months of experience consistently maintained a high percentage of Excellent KI, indicating that long term employees generally possess stable capabilities and good work performance. In 2022, 18 out of 22 employees in this group achieved Excellent KI and this trend continued in 2023 and 2024. This reflects the crucial role of accumulated experience in improving work efficiency.

Conversely, the group with less than 2 months of experience showed significant fluctuations and inconsistent quality. In particular, 2023 and 2024 saw a sharp increase in the number of employees with Good and Average KI (in 2024, there were 15 Good and 18 Average out of 38 people). This suggests that new employees often struggle to adapt to their jobs leading to lower performance in the initial period.

In addition, the 2- 6 month and 6- 12 months groups tend to gradually shift from average KI to fair and excellent KI, however the improvement is not yet truly significant. This shows that the process of improving employee capabilities takes time but may not be strongly supported by training programs or the work environment.

Notably, the total number of personnel increased from 75 in 2022 to 95 in 2023 and remained at a high level 93 in 2024 with a large proportion concentrated in the new personnel group (under 2 months). This reflects the continuous recruitment to compensate for the workforce leaving, and also shows the high volatility of the human resources in the department.

**Table 2.5: Comparison of employee turnover by seniority for the Period 2022-2024**

*Unit: People*

| **Seniority** | **2022** | **2023** | **2024** |
|---|---|---|---|

| | | | |
|---|---|---|---|
| More than 12 months | 3 | 4 | 5 |
| 6-12 months | 4 | 4 | 6 |
| 2-6 months | 8 | 10 | 7 |
| Under 2 months | 10 | 22 | 26 |
| Total | 25 | 40 | 44 |

*(Source: Author's compilation based on Bellsystem24 Vietnam, 2024)*

Data shows a clear differentiation in employee turnover at Bellsystem24 Vietnam based on seniority with the majority of new employees showing an increasing trend over the years. Specifically, the group with less than 2 months of service consistently has the highest turnover rate increasing from 10 people (50%) in 2022 to 26 people (68%) in 2024 while the group with 2- 6 months of service also maintains a high rate and increased sharply from 8 people (44%) to 7 people (64%), indicating that the majority of employees leave their jobs early in the period or before they have had time to settle in, clearly reflecting difficulties in adapting to the actual work environment. Conversely, the group with more than 12 months of service has a significantly lower turnover rate ranging from 3 to 5 people (14%- 19%) suggesting that employees who have been with the company for a long time have a greater ability to maintain stable employment. This partly stems from the characteristics of this group of employees who are often graduates or have families, tend to prioritize stability and can dedicate more time to their work. Meanwhile, the group with less than 6 months of service largely consists of students who are highly flexible but lack sustained commitment are easily affected by work pressure and personal factors leading to a high turnover rate. In addition, the increase in the total number of employees leaving from 25 to 44 shows the growing pressure to recruit and replace them. Some real-world examples show that during peak periods such as holidays when certain projects (for example those related to Viettel Post) are overloaded with personnel, the company may transfer staff from videocall channels to support roles instead of hiring new staff. However, this transfer only occurs in certain cases and is not applied to all employees. For transferred employees, higher work pressure, short training periods and stringent KPIs while salary remains unchanged can make it difficult for them to adapt and increase the likelihood of resignation. Furthermore, the gap between training content

and actual job requirements along with the training's reliance on self- motivation also contributes to employees being inadequately prepared before starting their new jobs. Overall, the core issue is not about long term employee retention but rather about the ability to adapt and maintain employees during the initial period when most employees leave the organization before achieving stability.

*2.2.2. Primary data analysis*

A total of 32 customer service employees at Bellsystem24 Vietnam participated in the survey through Google Forms. All 32 responses collected were valid with no questionnaires excluded due to missing or incomplete information. Therefore, the entire dataset was used for the subsequent analysis process. The primary data collected serves as an important basis for evaluating the effectiveness of internal training programs for customer service employees at Bellsystem24 Vietnam.

To ensure a systematic and comprehensive evaluation, this study applies the Kirkpatrick Training Evaluation Model which consists of four levels: Reaction, Learning, Behavior and Results. Based on this framework, the survey questions were grouped according to each evaluation level for analysis and interpretation. The collected data were coded and processed using SPSS software. Descriptive statistical analysis was employed to calculate frequencies, percentages and mean scores. The results were then used to assess employees' perceptions and evaluate the effectiveness of the company's internal training programs across the four levels of the Kirkpatrick model.

a. General Information

**Table 2.6. Demographic characteristics of the study sample**

| **Sample characteristics n=32** | | **Quantity** | **Proportion (%)** |
|---|---|---|---|
| **Status** | Student | 24 | 75% |
| | Graduated | 8 | 25% |
| **Time** | Under 1 month | 4 | 12.5% |
| | From 1-3 months | 22 | 68.8% |
| | From 3-6 months | 6 | 18.8% |

*(Source: Author, 2026)*

The survey sample consisted of 32 employees, the majority of whom were students (75%) while the group of graduates accounted for a lower percentage (25%). This indicates that the workforce is primarily young and has little practical experience.

Regarding length of service, the majority of employees had 1- 3 months of experience (68.8%) while those with less than 1 month and those with 3- 6 months of experience accounted for lower percentages at 12.5% and 18.8% respectively. This result suggests that the study sample mainly focused on new employees who are in the process of getting acquainted with and adapting to their jobs.

b. Employee perception scale for training programs (Kirkpatrick Level 1 - React)

**Table 2.7. Scale for measuring training programs**

| **Sample characteristics n=32** | | **Quantity** | **Proportion (%)** | **Mean Score** |
|---|---|---|---|---|
| **Level of job readiness after training** | Completely unwilling | 0 | 0% | 3.09 |
| | Not available | 3 | 9.4% | |
| | Ready | 23 | 71.9% | |
| | Completely ready | 6 | 18.8% | |
| **Training program duration** | Not enough | 0 | 0% | - |
| | Sufficient | 24 | 75% | |
| | Redundant | 4 | 12.5% | |
| | Practice needs to be increased | 4 | 12.5% | |
| **The most challenging program** | Entrance training | 7 | 21.9% | - |
| | Business orders | 19 | 59.4% | |
| | Information security | 1 | 3.1% | |
| | KPI retraining | 5 | 15.6% | |

*(Source: Author, 2026)*

Data from the table shows that employee responses to the training program were generally positive. Specifically, 90.7% of employees felt ready or fully ready to work after the training with the ready group accounting for the highest percentage

(71.9%). This indicates that the training program relatively well met practical job requirements. However, 9.4% of employees were still not ready reflecting that the program was not truly effective for all learners scale. This score is above the Ready threshold (3.0 points) quantitatively confirming the program's success in building psychological and practical confidence among the workforce. It demonstrates that the training effectively bridged the gap between theoretical knowledge and operational readiness for the vast majority of employees, establishing a solid foundation for practical work implementation. However, the company may need to supplement this with more intensive follow- up coaching to support the remaining minority in achieving full readiness.

Regarding training duration, the majority of employees (75%) rated it as sufficient indicating that the training time was generally reasonable. However, the fact that 12.5% of employees wanted more practical training suggests that the program was still too theoretical.

Notably, 59.4% of employees considered the content on business orders to be the most difficult, indicating that this is a complex area of knowledge and may not have been effectively communicated.

Overall, the training program received positive feedback but limitations remained regarding its practical relevance and the difficulty of some specialized content.

c. Scale for measuring employee knowledge and skills after training (Kirkpatrick Level 2 - Learning)

**Table 2.8. Scale for measuring the level of knowledge and skills acquired after training**

| **Sample characteristics n=32** | | **Quantity** | **Proportion (%)** | **Mean Score** |
|---|---|---|---|---|
| **Overall knowledge and skills** | Very incomplete | 0 | 0% | 3.69 |
| | Incomplete | 3 | 9.4% | |
| | Normal | 10 | 31.3% | |
| | Full | 13 | 40.6% | |
| | Very complete | 6 | 18.8% | |

| | | | | |
|---|---|---|---|---|
| **Practical problem-solving skills** | Absolutely not enough | 3 | 9.4% | 3.30 |
| | Insufficient | 5 | 15.6% | |
| | Normal | 15 | 46.9% | |
| | Full | 6 | 18.8% | |
| | That's perfectly sufficient | 3 | 9.4% | |

*(Source: Author, 2026)*

Although employees responded positively to the training program, the level of knowledge acquisition and application was uneven, particularly in practical skills.

Specifically, the Overall knowledge and skills achieved a positive mean score of 3.69/5.00. This is supported by the fact that 59.4% of employees rated their acquired knowledge as adequate and very adequate indicating a good foundation of basic training. However, 31.3% rated it as average and 9.4% as inadequate, reflecting that the theoretical content did not fully meet the personalized needs of all employees.

Regarding Practical problem solving skills, the effectiveness was significantly lower, evidenced by a mean score of just 3.03/5.00 (an average level). Only 28.2% of employees felt they possessed sufficient skills while the majority 46.9% rated them as average and a notable 25% considered them insufficient. This suggests that the training lacked necessary practical simulations, leaving employees inadequately equipped to confidently adapt to unforeseen real-world situations.

d. Scale for measuring the level of behavioral change after training (Kirkpatrick Level 3- Behavior)

**Table 2.9. Assessment of the level of behavioral change after training**

| **Sample characteristics n=32** | | **Quantity** | **Proportion (%)** | **Mean Score** |
|---|---|---|---|---|
| **Difficulties in the actual work** | Difficulty in handling unforeseen situations that arise outside the script | 18 | 56.3% | - |
| | Psychological pressure when making mistakes or | 13 | 40.6% | |

| | | | | |
|---|---|---|---|---|
| | being evaluated based on KPIs | | | |
| | The pressure of communicating directly with customers | 10 | 31.3% | |
| | Difficulty adapting to the pace of work and KPIs | 8 | 25% | |
| | It is difficult to remember and apply the order processing procedure | 7 | 21.9% | |
| | The system is slow and prone to errors | 0 | 0% | |
| **Level of confidence when working with clients (Video Call)** | Very lacking in confidence | 0 | 0% | 3.22 |
| | Diffidence | 6 | 18.8% | |
| | Normal | 16 | 50% | |
| | Confident | 7 | 21.9% | |
| | Very confident | 3 | 9.4% | |
| **Frequency of retraining required (due to weak KI)** | 0 times | 18 | 56.3% | - |
| | 1 times | 7 | 21.9% | |
| | 2 times | 5 | 15.6% | |
| | 3 times or more | 2 | 6.3% | |
| **Being reprimanded by supervisors** | Yes | 23 | 71.9% | - |
| | No | 9 | 28.1% | |

*(Source: Author, 2026)*

When employees lack practical skills, they struggle to apply their knowledge in real- world situations leading to numerous operational difficulties and a failure to achieve expected performance. Specifically, regarding practical work challenges, a striking 56.3% of employees encountered problems handling unforeseen situations outside the script, making it the most common issue. Additionally, 40.6% faced psychological pressure when making mistakes or being evaluated based on KPIs while

31.3% experienced pressure communicating directly with customers. Furthermore, 25% struggled to adapt to the pace of work and 21.9% had difficulty memorizing procedures. This highlights a high- pressure environment where theoretical knowledge alone is insufficient for practical application.

Regarding confidence levels during video calls, the workforce achieved a mean score of 3.22/5.00. While the group showing a positive tendency (confident and very confident) accounts for 31.3%, half of the employees (50%) still hover at a normal level and 18.8% remain diffident. This score indicates a moderately positive but highly unstable level of confidence. The large concentration at the normal level and below reflects that employees' ability to apply knowledge to practice is not yet truly solid. They require more time, practical experience and follow-up support to confidently engage with customers.

Notably, 71.9% of employees have received supervisory reprimands regarding their skills or performance, reflecting that the application of knowledge gained after training has not been truly effective and many errors still exist in the work process.

e. Scale for post- training outcomes through employee intention to leave and level of engagement (Kirkpatrick Level 4 - Results)

**Table 2.10. Measuring intention to leave and level of engagement after training**

| **Sample characteristics n=32** | | **Quantity** | **Proportion (%)** | **Mean Score** |
|---|---|---|---|---|
| **Intention to quit** | Never | 3 | 9.4% | 2.97 |
| | Sometime thought of it | 9 | 28.1% | |
| | It was seriously considered | 6 | 18.8% | |
| | Decided to resign | 14 | 43,8% | |
| **The tendency to stay with the company long-term (if the training program is** | Absolutely no desire to commit | 1 | 3.1% | 3.25 |
| | Less likely to | 1 | 3.1% | |

| | | | | |
|---|---|---|---|---|
| **improved)** | commit | | | |
| | Normal | 19 | 59.4% | |
| | Likely to commit | 11 | 34.4% | |
| | Deeply committed to a long-term stay | 0 | 0% | |

*(Source: Author, 2026)*

When employees struggle to apply their knowledge in practice and lack confidence in their work, these factors increase pressure and negatively impact the work experience leading to a high intention to quit and low levels of commitment.

Regarding the intention to quit, the situation is highly alarming, evidenced by a high mean score of 2.97 on a 4.00 point scale. Specifically, 43.8% of employees have already decided to resign, 18.8% have seriously considered it while 28.1% have occasionally considered leaving. Thus, a total of 90.7% of employees have considered leaving to varying consider an exceptionally high percentage. This indicates low employee stability and proves that the current training programs have not truly fostered long term commitment.

Regarding the tendency to stay with the company long term (if training programs are improved), the metric recorded a moderately positive mean score of 3.25/5.00. The majority of employees chose the normal neutral rating (59.4%) while 34.4% showed a tendency towards long term commitment (likely to commit). However, the percentage of employees who are deeply committed to a long term stay is 0% and a small minority (6.2%) still shows no inclination towards staying despite potential improvements.

The results indicate that although there is still a group of employees who tend to stay, their level of commitment is neither high nor sustainable. In particular, the overwhelming intention to leave reflects that the ultimate effectiveness of the training program has fallen short of expectations and is insufficient to retain personnel in the long term without immediate corrective interventions.

### *2.3 Analysis of Factors Influencing*

#### *2.3.1 External factors*

High work intensity and constant physical pressure:

The nature of customer service jobs places a significant physical and mental strain on employees especially in video call environments. The operational process requires employees to process information quickly accurately and repeatedly over extended periods. According to data from Bellsystem24, during peak periods the number of calls can range from 500 to 600 per day, significantly reducing rest time between shifts. Research by Deery et al. (2002) indicates that such excessive and continuous workload directly causes physical exhaustion, impairing concentration levels and actual work performance, particularly for newly hired employees.

Call volume fluctuations and the double pressure from performance indicators:

The unstable change in call volume over time is an objective factor that greatly affects the psychology and work efficiency of call center operators. Operational practice shows that call volume often increases significantly on normal days but decreases sharply during holidays or the Lunar New Year. Research on call center management by Aksin et al. (2007) suggests that call volume fluctuations are one of the major challenges for call center management as it increases the pressure to coordinate resources and maintain service quality.

Complexity of operations and challenges in handling scenarios outside of the script:

Increasingly difficult and diverse professional requirements are also a factor that increases the level of stress during operations. Survey data from Bellsystem24 Vietnam shows that content related to business orders accounts for the highest percentage of complexity while the actual work requires employees to flexibly handle many unforeseen situations outside of pre- established scenarios. Burke and Hutchins' (2007) theoretical framework on skill transfer explains that when practical skills are not yet solid, employees find it difficult to apply learned theoretical knowledge to practice. The lack of opportunities for hands on experience makes them hesitant when faced with complex paperwork or daily operational changes.

Psychological characteristics and lack of experience of the young workforce:

The characteristics of a young, less experienced workforce profoundly impact the results of short term training programs. Statistics show that up to 75% of personnel are students and the vast majority have less than 3 months of practical work experience. Research by Tran Kim Dung (2020) in Vietnam confirms that this group of young

workers often faces limitations in practical experience, problem solving skills and the ability to withstand high pressure. Therefore, they take longer to adapt to the field work environment making short term training courses less effective without a long term support plan from the company.

The development of artificial intelligence and automation:

The explosion of artificial intelligence technology from outside has fundamentally changed the nature of work for workers in the call service industry. As automated answering systems such as chatbots or voicebots handle most simple requests, human employees only handle highly complex cases that require more time and effort to process. Research by Huang and Rust (2018) in the Journal of Service Research indicates that this technological shift inadvertently increases mental pressure and pushes call center operators' stress levels to a new limit. Constantly having to handle difficult situations that machines refuse to resolve easily leads to mental fatigue during shifts.

Increased negative attitudes and inflammatory language from customers:

Customer behavior and psychology in society are external factors that directly impact employee stability daily. In the context of fast- paced modern life, consumer patience tends to decrease leading them to easily express anger or utter insults over the phone when encountering problems. Research by Grandey et al. (2004) in the Journal of Organizational Behavior clarifies that constantly receiving negative customer reactions forces employees to expend a great deal of energy to control their personal emotions. The long term accumulation of these psychological traumas is a major cause of increased burnout rates and leads employees to decide to quit their jobs.

*2.3.2 Internal factors*

The training method has not optimized practical professional skills:

The first limitation lies in the design of the training method which is heavily theoretical and one- way lacking interactive visual tools. Although the online information security training program is built with a clear roadmap, this format lacks direct interaction and relies entirely on the learner's self- discipline. Facing dry, text-based learning makes young workers prone to superficial learning, learning just to pass computer- based tests. This explains why 59% of employees rate their knowledge as sufficient but their ability to apply it in practice on the floor is very limited. The

transfer of new knowledge only focuses on static theory and has not yet built practical behavioral reflexes in front of video call cameras for personnel in the initial stages.

Lack of on- site and post- training support systems:

The next limitation is the significant gap in employee support after training. Once the course ends, new employees are left to fend for themselves without adequate support from activities such as direct guidance, coaching or desk mentoring. Evidence shows that 71.9% of employees received warnings from supervisors and 43.7% were forced to participate in retraining. The lack of one- on- one mentoring from experienced colleagues prevents new employees from consolidating their skills leading to confusion and increasing the rate of operational errors when handling complex customer paperwork independently.

Double pressure from KPIs and punitive management mechanisms:

The system of performance indicators (KPIs) and strict shift monitoring mechanisms are creating an overwhelming psychological burden for employees. Although KPIs have been designed to gradually reduce the demands on new employees, the overall workload remains very high, forcing call center operators to handle hundreds of orders per shift and handle 500 to 600 calls per day. In particular, the inflexible KPI based pay mechanism on slow days such as holidays inadvertently forces employees to double their workload on subsequent days to compensate for missed targets. More worryingly, Bellsystem24 Vietnam is turning retraining programs into tools for punishing and reprimanding underperforming employees instead of acting as a morale booster directly causing burnout and undermining employee motivation.

Employee retention policies have failed to create long term commitment:

The inevitable consequences of the aforementioned pressures and training gaps have led to the failure of employee retention policies. Despite the company's support for training costs and clear career paths, the rate of employees intending to leave has reached an alarming level with 43.8% having decided to resign. This figure reflects the reality that the current training program has not created a lasting bond between employees and the organization. Employees choose to leave the company early not because they don't want advancement but because they are pushed into the real- world work environment too quickly while their practical skills are not yet well-

developed leading to burnout and mental exhaustion before they can access more in-depth professional training courses after just two months of seniority.

### *2.4 General Assessment of the Research Problem over the past 3 years*

#### *2.4.1 Achievements*

Based on data analysis from 32 customer service personnel, it can be affirmed that internal training at Bellsystem24 Vietnam has achieved remarkable results, particularly in the design of training pathways and the level of foundational knowledge acquisition by trainees.

The company has built a systematic, comprehensive training system with a clear commitment to investment. Instead of fragmented training, programs are divided according to a roadmap closely aligned with employee engagement including: onboarding, information security training, retraining and advanced training for corporate clients. Notably, the company applies a training cost subsidy policy for participating trainees, demonstrating the organization's serious investment and long term human resource development strategy.

Trainees have responded very positively and achieved a high level of readiness with Bellsystem24 Vietnam internal training program. The survey results show that the program was successful in designing a fundamental learning experience. Specifically, 75% of employees rated the training duration as sufficient indicating that the program had a moderate amount of knowledge and did not overwhelm learners. Notably, the training established psychological confidence in new employees with 71.9% rating it as ready and 18.8% as fully ready to start work with an average positive score of 3.09.

The effectiveness of conveying general knowledge and foundational theories was good. Primary data confirms that employees have been adequately equipped with foundational knowledge of operations, processes and business systems. According to survey results measured on a 5- point Likert scale, the average score for overall knowledge and skills assessment was quite high at 3.69/5.00 reflecting a fairly positive assessment from survey participants. Reinforced by the fact that 59.4% of employees reported having acquired sufficient or very sufficient knowledge, the program has proven successful in bridging the gap between theory and basic operational requirements.

*2.4.2 Limitations*

Despite initial successes in training programs, Bellsystem24 Vietnam's internal training system for video call customer service channels is still revealing serious strategic gaps. This disconnect is evident between theoretical training outcomes and employees' practical response capabilities, directly leading to an alarming rate of employee turnover.

**a. The gap between training knowledge and practical application**

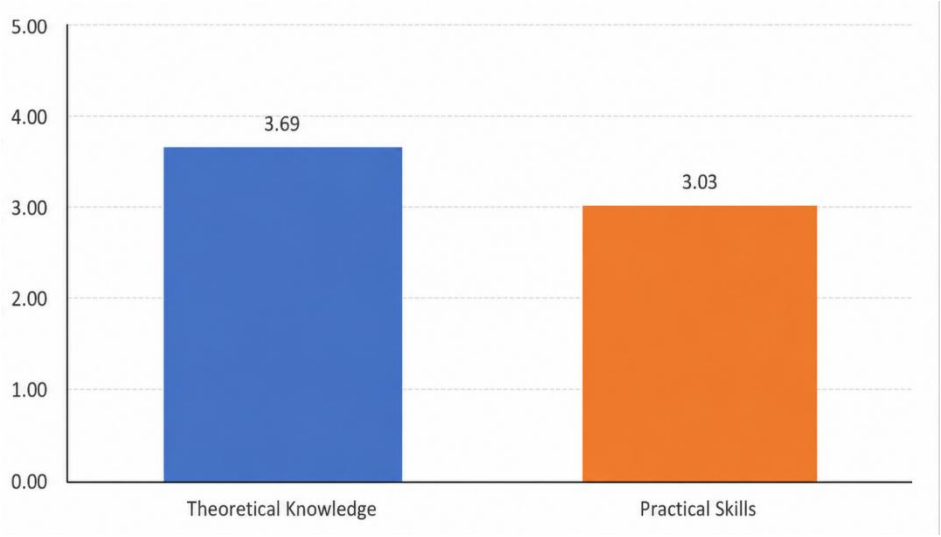

**Figure 2.4. Average score of employees' theoretical knowledge and practical skills**

*(Source: Author, 2026)*

The survey results show that the current internal training programs at Bellsystem24 Vietnam help employees understand basic knowledge but do not provide enough opportunities to practice real work skills. As a result, there is a noticeable gap between theoretical understanding and the ability to apply knowledge in actual work situations.

For the onboarding training program which lasts about 10 days, most of the training time is used to introduce company procedures, regulations, systems and basic job knowledge. Exposure to the real working environment is only arranged during the last three training sessions. In each session, trainees spend only half a day listening to customer calls and usually observe about three to four calls before the session ends. Because of this limited practice time, many employees do not have enough opportunities to become familiar with real workplace situations before starting their jobs.

A similar situation can be found in other training programs. The Information Security Training program is delivered entirely through an e- learning system and mainly depends on employees' self- study. The Enterprise Customer Training program which is provided after about two months of work focuses mainly on explaining procedures and updating new business knowledge. Meanwhile, the Retraining program is mostly used to review existing knowledge and correct mistakes found during daily operations. Overall, most training programs focus more on delivering information than on providing practical experience.

This imbalance between theory and practice is clearly reflected in the survey results. The average score for knowledge was 3.69 out of 5.00 while the average score for practical problem- solving skills was only 3.03 out of 5.00 with 25% of employees admitted that they lacked practical problem- solving skills. Furthermore, 56.3% of employees reported difficulties when dealing with situations that were not covered in the standard script.

As a result, many employees still face challenges when performing real work tasks even after completing the training programs. The survey found that 71.9% of employees had received warnings or reminders from supervisors regarding their work performance. These findings indicate that the current training programs help employees understand procedures and job knowledge reasonably well but they do not fully support the development of practical skills needed to handle real workplace situations effectively.

**b. Post training activities focus more on error correction than employee support and development**

Survey results show that retraining activities at Bellsystem24 Vietnam are currently provided mainly to employees who have low KPI results or make mistakes during work. In practice, these programs act more as a corrective measure after problems have already occurred rather than as a tool for continuous employee development.

In the call center environment, new employees often face considerable pressure when interacting with customers for the first time. However, after completing approximately ten days of initial training, most employees move directly into actual operations and are evaluated through performance indicators (KPIs). When they

encounter difficulties in handling customer calls, they are usually assigned to retraining programs only after their KPI results have declined or after operational errors have occurred. As a result, training becomes associated with mistakes and negative performance outcomes instead of being viewed as a professional development activity.

This issue is reflected in the survey findings where 40.6% of employees reported feeling pressure when making mistakes or being evaluated through KPI results. In addition, 71.9% of employees stated that they had received warnings or reminders from supervisors regarding their work performance. These figures suggest that the relationship between training activities and performance management is currently focused more on identifying and correcting errors than on helping employees overcome difficulties during their early working period.

Furthermore, survey results and operational data indicate that the company has not yet established a strong workplace support system for new employees after training. After completing the initial 10 day training program, employees enter the actual working environment and begin to be evaluated through KPI measurements. However, during the early stage of customer interaction, many employees are required to handle unexpected situations on their own despite having limited practical experience.

This situation is reflected in the finding that 56.3% of employees reported difficulties in handling situations outside standard scripts while 71.9% had received warnings or reminders related to work performance. In addition, company data from 2024 showed that only 5 out of 38 employees with less than two months of experience achieved an Excellent KPI rating. These figures indicate that many employees continue to face challenges during the transition from training to real operations.

Meanwhile, support activities are mainly provided through retraining programs after employees have already made mistakes or achieved low KPI results. There is currently no formal mentoring, coaching or individual monitoring system implemented in a structured manner to support new employees during their first stage of work. As a result, much of the learning process takes place through trial and error in real working situations, increasing psychological pressure and extending the adjustment period for employees in the Video Call department.

Therefore, the main limitation of the current training system is not the number of training programs but the timing and method of implementation. Most training activities are conducted only after employees experience difficulties or make mistakes while workplace support during the early stage of employment remains limited. This reduces the effectiveness of transferring training knowledge into actual job performance and makes it more difficult for employees to adapt to the high- pressure operating environment.

**c. The training program has not been designed based on the characteristics of the core workforce**

One notable limitation of the current training system is that the training programs are designed in a relatively standardized way while the workforce in the Video Call department has very specific characteristics. Survey results show that students account for 75% of the respondents and most employees have less than three months of working experience. This workforce is mainly made up of young employees who are still in the early stage of their careers.

The survey results indicate that 56.3% of employees experience difficulties when handling situations outside the standard script. In addition, 40.6% reported feeling pressure when making mistakes or being evaluated through KPI measurements while 31.3% felt pressure when communicating directly with customers through Video Call. These findings suggest that many employees face challenges not only in their daily tasks but also in adapting to the demands of the job.

However, the current training programs mainly focus on delivering operational procedures, work regulations and basic job requirements in the same way for all trainees. While this approach helps employees understand fundamental knowledge, it does not fully address the practical difficulties that many young employees face when entering the workplace.

The survey also shows that 40.6% of employees feel stressed when they make mistakes or are evaluated based on KPI results while 31.3% experience pressure when communicating directly with customers through Video Call. These difficulties are not only related to professional knowledge but are also connected to emotional control, stress management and the ability to adapt to a high- pressure working environment. However, current training content mainly focuses on order processing procedures and

operational rules while soft skills such as stress management, emotional control and communication with difficult customers receive less attention.

In addition, 59.4% of employees identified order processing as the most difficult part of the training program. This result suggests that the complexity of the job does not only come from remembering procedures but also from adapting to constantly changing situations in real work. Despite this, the current training system still follows a similar learning path for all employees and does not provide different training approaches based on employees' experience levels, learning speed or individual needs.

Therefore, the limitation of the current training program is not only related to the lack of practical training opportunities. It also comes from the fact that the program does not fully reflect the characteristics and needs of the department's main workforce. When training focuses more on delivering operational knowledge than helping employees deal with the actual challenges they face at work, their ability to adapt to the job may be affected especially during the early stage of customer interaction and KPI based performance evaluation.

**d. Training programs are not linked to post- training adaptation and the working time characteristics of the core workforce.**

Although training programs help employees acquire basic knowledge and procedures before starting work, the current system lacks a mechanism to support employees during the transition from training to actual operation. After completing the initial training, employees are almost immediately expected to meet the same shift requirements and performance targets as experienced employees.

Meanwhile, survey results show that the workforce in the Video Call department is primarily students, accounting for 75% of the total survey participants. This group of workers often has to balance their study and work schedules simultaneously. However, the current shift scheduling mechanism remains fixed and largely dependent on the operational needs of the business. This lack of flexibility in arranging working hours makes it difficult for many employees to adapt to the job. Furthermore, the current performance evaluation system does not clearly differentiate between new and experienced employees. In the initial stages of employment, many employees are still familiarizing themselves with processes, systems and the pressure

of direct customer interaction. However, they still face relatively high KPI targets from the very first months. This increases psychological pressure especially for employees with limited practical experience.

This limitation is reflected in the very high rate of intention to leave with 43.8% of employees stating they have intended to leave and 90.7% having considered leaving the company. Simultaneously, the number of employees leaving within the first two months has been steadily increasing in recent years. This indicates that current training programs are not effectively linked to the onboarding and retention of personnel after training.

*2.4.3 Causes of the limitations*

Regarding the significant gap between theoretical understanding and practical behavioral competence, the core reason for this limitation stems from flawed end- of-course assessment methodology by the training department. This leads to an over-reliance on purely theoretical tests and creates an illusion of readiness. The training process concludes with theoretical multiple choice tests which only measure cognitive ability, resulting in 59.4% of participants self- assessing their knowledge as adequate or very adequate, bringing the overall knowledge average score to a relatively good 3.69/5.00. The course also creates a false psychological response with 90.7% of trainees claiming to be ready and fully prepared for work. However, because the assessment tool does not simulate a visual interactive environment, practical behavioral competence immediately suffers. The average score for practical problem-solving is only 3.03/5.00, and as many as 25% of participants lack this skill. As a result, upon starting work 56.3% of employees struggled with unforeseen situations and 71.9% were immediately reprimanded or criticized by their supervisors for performance issues.

Regarding the limitations related to the mismatch between the training program and the characteristics of the core workforce one important cause is that the current training system is designed mainly based on operational requirements rather than the learning characteristics of employees. Although the Video Call department is largely composed of students and newly recruited employees, the training content, learning activities and training schedule are delivered in a relatively standardized manner for all trainees. Survey results show that students account for 75% of the

workforce and that most employees have less than three months of working experience. This group of employees is often entering a professional working environment for the first time and therefore faces different challenges compared with experienced workers. Besides learning operational procedures, they also need time to adapt to KPI based performance evaluation, direct customer communication and the pressure of handling customer requests through Video Call. However, the current training program mainly focuses on introducing work procedures, operational regulations and job- related knowledge. While these contents are necessary for performing the job, they pay less attention to the development of supporting competencies that are particularly important for young employees such as stress management, emotional control, communication confidence and adaptation to a high- pressure working environment. In addition, the training program follows a similar learning path for all employees despite differences in experience levels, learning speed and individual development needs. As a result, the program may not fully address the difficulties faced by the department's main workforce. This issue is reflected in the survey findings where 56.3% of employees reported difficulties when handling situations outside the standard script, 40.6% felt pressure when making mistakes or being evaluated through KPI measurements and 31.3% experienced pressure when communicating directly with customers through Video Call. Furthermore, 59.4% of employees identified order processing as the most difficult training content. This suggests that employees face challenges not only in understanding procedures but also in applying knowledge flexibly in changing work situations. Therefore, the cause of this limitation is not simply the lack of training time or training content. More importantly, the current training design has not been sufficiently adjusted to match the characteristics, experience level and adaptation needs of the department's core workforce.

Regarding the limitations of the current retraining mechanism and the lack of an on- the- job support system, one important cause is the absence of continuous learning support after employees complete their initial training program. After approximately ten days of training, new employees are transferred directly to the operational environment and begin handling customer interactions while being evaluated through KPI indicators. However, there is currently limited evidence of a structured mentoring, coaching or on- the- job guidance system to support employees

during this transition period. As a result, many employees have to adapt to actual work requirements largely through their own experience. This challenge is reflected in the survey results where 56.3% of employees reported difficulties in handling situations outside the standard script. At the same time, performance data show that only 5 out of 38 employees with less than two months of experience achieved an Excellent KPI rating in 2024. These findings suggest that the period immediately following training remains a difficult stage for many new employees. Another contributing factor is that retraining activities are mainly organized after employees have already experienced performance problems or achieved low KPI results. Instead of functioning as a continuous development tool, retraining is often used as a corrective measure when performance gaps have already appeared. Consequently, employees may associate retraining with mistakes and negative performance evaluations rather than with professional growth and skill development. This situation is reflected in the survey findings where 40.6% of employees reported feeling pressure when making mistakes or being evaluated through KPI measurements while 71.9% had received warnings or reminders related to work performance. These results indicate that the current training and performance management process tends to focus more on correcting existing problems than on providing proactive support during the early stages of employee development.

Regarding the limitation that the internal training program is not well connected with the post- training adaptation process and the working time characteristics of the core workforce, the main cause comes from the training program's failure to effectively manage employees' expectations and prepare them for the actual working environment before they officially start their jobs. During the training period, many trainees especially students who account for 75% of the surveyed workforce, develop expectations of a workplace with flexible working schedules. However, detailed information about actual operational requirements, shift regulations and KPI pressure is often communicated more clearly only at the end of the training course. As a result, the difference between employees' initial expectations and the reality of the job creates an expectation shock just before they officially begin working. In addition, the current training program mainly focuses on business knowledge, operational procedures and work processes. It does not provide employees

with a realistic understanding of the actual working conditions in the Video Call department where employees must remain available to receive customer calls continuously, work under KPI pressure and handle unexpected customer situations on a daily basis. Therefore, many employees only fully realize the real demands of the job after completing the training program or after starting actual work. The consequences of this gap between expectations and reality can be clearly seen in the survey results. The average turnover intention score reached 2.97 out of 4.00. In addition, 43.8% of employees stated that they had already decided to leave the company while 90.7% reported that they had seriously considered or occasionally thought about leaving. More importantly, no employee showed a strong long term commitment to staying with the company even if working conditions were improved. These psychological reactions eventually turned into actual turnover behavior. Human resource data show that the number of employees with less than two months of tenure who left the company increased from 10 people in 2022 to 26 people in 2024, accounting for a large proportion of total employee turnover. This indicates that the problem is not only related to knowledge transfer during training but also to the program's inability to help employees fully understand the nature of the job, prepare mentally for workplace challenges and build commitment to the organization from the beginning.

# CHAPTER 3: ORIENTATIONS, OBJECTIVES, AND SOLUTIONS FOR THE RESEARCH PROBLEM IN THE COMING YEARS

## 3.1. Orientations

In the context of the rapidly shifting business process in the business process of providing services and outsourcing (BPO), personnel training can no longer maintain a one- way knowledge transmission method. To optimize resources and enhance competitiveness, Bellsystem24 Vietnam's training strategy in the coming period needs to establish a clear orientation framework creating a strong connection between business development strategy and human resource management strategy. This strategic orientation is concretized through three core pillars: shifting the strategy from quantitative training to adaptive training and employee retention, linking training with the company's digital transformation strategy and modernizing and personalizing the approach according to the characteristics of generation Z.

### *3.1.1. Shifting the strategy from quantitative training to adaptive training and employee retention*

In alignment with the enterprise philosophy, this orientation deeply concretizes the value of people in delivering excellent customer experiences at Bellsystem24 Vietnam. The organization understands that only when employees are well- prepared psychologically and competently can they represent the company and deliver excellent customer experiences. The focus is on thoroughly addressing the significant gap between theoretical understanding and practical behavior. Referencing Zappos' customer service management model (Anushka Gore, 2025), the training focus will shift from rigid process control to enhancing emotional intelligence (EQ) and protecting employees from stress. By the end of 2027, Bellsystem24 Vietnam aims to reduce employee turnover by at least 35% in the group with less than two months of experience (a group that peaked at 26 employees leaving in 2024). The 10 day onboarding training program will reallocate 30% of its theoretical time to modules on empathetic thinking and stress management skills. Simultaneously, the monthly retraining mechanism will change its nature from a punitive tool for employees with weak KPIs to a proactive capacity building program, aiming to eliminate the 40.6% of employees experiencing psychological stress.

*3.1.2. Integrating training with the* company*'s digital transformation strategy*

This orientation represents a strategic step toward realizing Bellsystem24 Vietnam's vision 2030 which aims to become a leader in technology and digital transformation within the Business Process Outsourcing industry. The adoption of advanced educational technology solutions demonstrates the organization's pioneering position in technological innovation.

This orientation addresses the current limitation regarding the lack of interactive and visual training methods for the Video Call service channel while simultaneously preparing employees to cope with operational pressure. The company will gradually reduce purely theoretical and lecture-based learning modules delivered through the existing Bellsystem24 Vietnam e- learning system and transition toward a simulation-based training model.

As an initial phase, the company plans to test, evaluate and officially deploy the AI Call Simulator system utilizing Voice Bots and Video Bots by the end of 2027. The system will leverage existing hardware infrastructure to create a safe laboratory environment, allowing trainees to practice visual responsiveness and face- to- face interaction skills in front of a camera without fear of being criticized or reprimanded by supervisors. This solution is expected to help reduce the proportion of employees receiving corrective feedback which currently stands at 71.9%.

Subsequently, the AI Simulator will be integrated on a broader scale into the Cloud Contact Center system. The simulation platform will be programmed to accurately replicate the intense operational pressure of peak- season projects with workloads reaching up to 500- 600 calls per day, equivalent to two to three times the standard target. Training under simulated high- workload conditions will enhance employees' practical behavioral competencies and improve their ability to adapt to the organization's fast- paced operational environment thereby addressing the issue that 25% of employees are unable to adapt to the company's shift- based working model.

*3.1.3 Modernizing and personalizing the approach according to generational characteristics (Gen Z)*

This orientation deeply protects Bellsystem24 Vietnam's culture of integrity and transparency. The company is committed to building a consistent communication environment, respecting commitments to learners and rejecting unrealistic disciplinary

measures. This direct approach restructures the curriculum to better suit the reality that 75% of the workforce consists of students and addresses the shock of high expectations at the end of the training course. The rigid 8 hour per day learning schedule will be completely replaced to avoid burnout and scheduling conflicts for students. By mid- 2027, the training department will complete the transition of 100% of the heavy theoretical curriculum to a hybrid micro- learning framework. Complex knowledge blocks, such as business order processing a core issue struggling 59.4% of trainees will be modularized into video lessons under 15 minutes and gamified on mobile platforms to allow students to independently manage their learning pace. To overcome the crisis of a turnover intention index of 2.97/4.00 and a 0% long term commitment rate, the training communication strategy will implement a Realistic Job Preview (RJP) mechanism from day one. Flexible shift changes and days off will be transparent from the start and all forms of threats of salary withholding or extreme dismissal at the end of the course will be strictly prohibited, helping trainees maintain morale and create a sustainable commitment to the organization.

### *3.2. Objectives*

The core and most important objective is workforce stability and talent retention. Specifically, the goal is to reduce the turnover rate among new employees (less than 2 months of seniority) from the current 68% to a manageable level of below 50% within the next 12 months. To achieve this goal, the limitations of the internal training program must be overcome.

Bridging the gap between theory and practical skills: Overcome the knowing but not being able to do limitation by restructuring the training curriculum to prioritize practical simulations. The objective is to ensure that at least 75% of new employees can handle real- world scenarios independently without struggling.

Enhancing psychological resilience and confidence: Directly address the deficit in employee confidence by equipping them with stress- management and adaptive skills. The goal is to raise the proportion of staff feeling confident or very confident during customer video calls from the current 31.3% to over 50%.

Standardizing performance and minimizing retraining: Solve the issue of inconsistent work performance by establishing a robust post- training coaching mechanism. The objective is to lower the percentage of employees reprimanded for

procedural errors from 71.9% to under 40% and reduce the mandatory retraining rate from 43.7% to below 25% thereby minimizing hidden operational costs.

Balancing operational pressure and the evaluation system: Mitigate the effort-reward imbalance by aligning training outcomes with realistic KPI expectations. The goal is to shift from a control- oriented management style to a supportive one, preventing employee burnout and fostering long- term engagement.

### *3.3. Solution*

Based on the limitations and underlying causes in chapter 2, Bellsystem24 Vietnam's training department needs to implement a one- on- one response system to address the remaining issues. To optimize resources, the company should not pursue large- scale theoretical training programs but should prioritize improving fundamental, practical training platforms to directly support operations and retain personnel. These measures focus on changing teaching methods, digitizing shift scheduling processes and building an on- site support team to address the root causes of operational bottlenecks.

**Table 3.1. Correspondence Between Identified Training Limitations and Proposed Solutions**

| No. | The limitations are identified in Chapter 2 | Proposed solution |
|---|---|---|
| **1** | The gap between training knowledge and practical application | Increase the duration of situational practice and incorporate call simulation software into the training program. |
| **2** | Post training activities focus more on error correction than employee support and development | Establish a workplace mentoring system and transform retraining into continuous professional development programs |
| **3** | The training program has not been designed based on the characteristics of the core workforce | Develop an Error- Based and Video-Supported Training System |
| **4** | Training programs are not linked to post-training adaptation and the working time characteristics of the core workforce. | Allow employees to choose their own shifts on the internal application and reduce KPI targets in the first month. |

*(Source: Author, 2026)*

*3.3.1. Increase the duration of situational practice and incorporate call simulation software into the training program.*

This solution aims to address the issue of trainees achieving very high theoretical scores (3.69/5.00) but struggling in real- world situations with 56.3% and 71.9% being reprimanded by management due to a lack of practical reflexes.

The first step is to change the allocation of the 10 day training period for personnel. Based on the theory of Lombardo and Eichinger (1996), applying the 70-20-10 model the company needs to reduce the number of theoretical lectures to a single day. The next two days should be dedicated to trainees listening to real- life sample calls and the remaining seven days should be dedicated to trainees directly practicing handling simulated situations.

To allow personnel to practice handling simulated situations, Bellsystem24 Vietnam needs to use call simulator software. During the 7 day training period, participants will hear and practice what a real- world job entails but through a simulated call system where AI acts as a virtual customer. This helps them become familiar with system operations and more easily grasp the work process than simply listening to theory without psychological pressure. Furthermore, instead of a paper-based multiple- choice test at the end of each training course, the company requires trainees to take a live conversation with a virtual customer played by an AI robot via camera. Trainees must practice handling angry customers and aggressive complaints until the software indicates a satisfactory response score before being allowed to work on the real floor, completely eliminating the current 71.9% reprimand rate.

*3.3.2. Establish a workplace mentoring system and transform retraining into continuous professional development programs*

This solution aims to eliminate the supervisory error- finding mechanism and replace the periodic retraining program that is causing mental stress for 40.6% of new employees.

Build a team to guide and support new employees directly at their desks or create quick support chat groups on Zalo to share tips on handling difficult situations. Alternatively, the company could leverage the advantage of having 75% of its workforce being students by selecting high- achieving students with over six months

of experience to act as learning assistants for new employees. Each assistant would be responsible for sitting next to, mentoring and supporting one new employee during their first two weeks on the floor. When encountering difficult order tasks or customers speaking in a harsh tone, the instructor would directly guide or assist on the spot. Timely guidance and support help new employees overcome their fear of making mistakes, preventing psychological shock and completely replacing the need for monthly retraining. However, assigning employees with more than six months of experience to mentor and support new employees can present certain challenges. Besides their current workload, these employees will have to dedicate additional time and effort to mentoring which could negatively impact their personal productivity in the short term. Therefore, to ensure the effectiveness and sustainability of the program, Bellsystem24 Vietnam needs to develop a suitable and timely reward system such as recognizing achievements, performance bonuses or other forms of encouragement. This will help motivate experienced employees to be more proactive, positive and comfortable in supporting and guiding new employees to integrate into the work environment.

In addition to providing direct support at the workplace, Bellsystem24 Vietnam should also change the purpose of its periodic retraining programs. At present, retraining sessions are mainly organized for employees with low KPI results or work-related mistakes. As a result, many employees view these programs as a way to correct errors rather than an opportunity for learning and professional development.

Instead, Bellsystem24 Vietnam should transform retraining sessions into regular business update programs for all employees. Due to the nature of the Video Call department, order processing procedures, customer verification requirements and operational guidelines are frequently updated on a weekly or monthly basis. Currently, most of these updates are posted on the company's internal system, requiring employees to monitor and study them by themselves.

Because employees must remain available to receive and handle customer calls throughout their shifts many of them can only use break times or after work hours to read and learn new procedures. This not only reduces their rest time but also makes the learning process less effective and increases the risk of mistakes at work.

Therefore, retraining sessions should be organized as short and regular knowledge update meetings. These sessions should focus on explaining new changes, providing guidance on common work situations and sharing common mistakes found in daily operations. This approach can help employees receive information in a more structured way reduce the pressure of self learning during break time and minimize errors caused by not fully understanding new business procedures.

*3.3.3. Develop an Error- Based and Video-Supported Training System*

Instead of building training programs based on a fixed structure of chapters, lessons and theoretical content Bellsystem24 Vietnam should adopt a training approach based on real operational mistakes. Training content should be developed from internal error reports rather than relying only on a standard training framework. For example, internal records show that the most common mistakes include unclear citizen ID card images, customer face images that do not match the actual customer and errors when uploading required documents. Therefore, about 70% of training time should focus on these three major error categories instead of being distributed equally across all topics. This approach helps training better match actual job requirements and allows employees to focus on the tasks that have the highest risk of mistakes. As a result, training effectiveness can be improved, error reduction can be achieved more quickly and employees can see the practical value of the training instead of spending too much time on topics that rarely occur in daily work.

In addition, the company should develop a Video Case Library specifically for the Video Call department. At present, most onboarding training sessions still focus on traditional classroom teaching where trainees mainly listen to lectures and take notes. To increase learning through real work experience, the company can build a video case library based on actual customer calls.

The data for this library can be collected from the Quality Inspection (QI) process that is regularly conducted to evaluate service quality. During random reviews of employee calls, supervisors can identify and classify typical cases for training purposes. These videos can be grouped into different categories such as excellent calls, calls containing operational mistakes, difficult customer interactions, customer verification cases, complex document processing cases and situations that occur outside standard scripts.

Each video should be short, around 3 to 5 minutes and include comments or notes from supervisors at important moments during the call. For example, a note may explain that at minute 1:20 the employee correctly followed the customer verification process while at minute 2:45 the employee made a mistake when handling customer documents. This detailed analysis helps trainees understand why certain actions lead to positive or negative outcomes instead of simply memorizing procedures.

Compared with traditional theory- based training, the Video Case Library allows new employees to observe a large number of real situations within a short period of time. Through watching and analyzing different successful and unsuccessful cases, new employees can gain exposure to many customer situations before officially handling calls themselves. This helps improve observation skills, problem- solving reactions, risk awareness and practical work experience.

The solution is especially suitable for the Video Call service because employees must communicate face- to- face with customers through a camera. By observing real cases, trainees can learn how to control facial expressions, maintain a professional smile, respond to unexpected situations and manage negative emotions when dealing with rude or aggressive customers.

Besides making learning more flexible, converting training content from text into video format can also improve learning effectiveness. According to Mayer's Cognitive Theory of Multimedia Learning (2009), people tend to understand and remember information better when content is presented through both words and images rather than text alone. Therefore, digitizing business knowledge into visual learning videos can reduce learning pressure during the onboarding period and help employees understand and remember business procedures more effectively.

As a result, the company can reduce the amount of classroom- based theoretical training and spend more time on practical activities, case analysis, simulations and real-world problem- solving skills that are directly related to daily operations.

*3.3.4. Allow employees to choose their own shifts on the internal application and reduce KPI targets in the first month.*

This solution directly targets the ultimate strategic goal of lowering the alarmingly high resignation intention index with 43.8% already having decided to resign and halting the increase in the number of employees leaving within two months

from 10 to 26 while also addressing the pressure of handling 500- 600 calls per day during peak season.

The company built a flexible shift bidding system, creating a shift exchange platform on an internal application. Weekly, short shifts (2 hours, 4 hours, 6 hours) are pushed up so that the student group (75%) can freely register to match their school schedules. This time autonomy eliminates the shock of rigid shift regulations. To mitigate the risk of staff shortages in late shifts, the system does not operate on a one-way free selection mechanism but coordinates the flow of people using two self-balancing levers. Late night or evening shifts will be automatically priced higher by multiplying income by a factor of 1.3x to 1.5x or offering bonuses. This appeals to students' desire to maximize short term income, encouraging them to voluntarily take on challenging shifts. Conversely, shifts during regular business hours will automatically have a maximum number of people based on projected call volume. Personnel wishing to work on these desirable shifts must accumulate priority points by rotating through previously assigned difficult or high- demand shifts. This self-balancing mechanism, using economic leverage ensures the commitment to service quality with partners while effectively resolving the scheduling conflicts faced by 75% of the student workforce.

In the first 30 days after training, the company should implement a progressive KPI mechanism where performance requirements are gradually increased each week to help employees adapt to the real- world work environment. The first month will focus solely on qualitative process evaluation, strictly prohibiting the use of output to determine penalties or threaten salary withholding. Simultaneously, an automated algorithm will be implemented to provide immediate bonuses during shifts when employees exceed their workload (500- 600 calls/day), re- establishing absolute fairness between effort and reward, thus retaining employees long- term within the organization.

## C. CONCLUSION AND RECOMMENDATIONS

### 1. Conclusion

This graduation thesis has fully and meticulously achieved the initial research objectives, contributing both theoretically and practically to improving the

effectiveness of internal training at the Video Call department of Bellsystem24 Vietnam. Theoretically, the thesis successfully systematized core concepts of training in the context of digital services, particularly clarifying evaluation criteria according to the four level Kirkpatrick model and psychological characteristics, applying visual interaction theory specifically for the Video Call channel.

Practically, the thesis conducted an in-depth analysis and evaluation of the current state of training activities at the enterprise during the three year period from 2022 to 2024 based on reliable secondary and primary data sources. The study frankly acknowledges Bellsystem24's encouraging achievements, such as building a comprehensive training roadmap from onboarding to advanced training, coupled with an attractive cost support policy, demonstrating a strategic mindset that considers people as its greatest asset. However, the thesis also identifies four core limitations directly hindering the company's operational efficiency.

Adhering closely to the systemic causes of these limitations, the thesis has developed a highly practical, one- to- one system of reciprocal action solutions. These solutions do not follow a macro- theoretical approach but focus on reforming teaching methods, digitizing work schedule management processes and transforming the operational floor culture towards a nurturing approach. Overall, the entire research content of the thesis forms a tight, dialectical logic, successfully completing the task of solving the problem of stabilizing the flow of young human capital for the organization.

## 2. Recommendations

### 2.1. Recommendations for Bellsystem24 Vietnam Inc.

To optimize costs and improve employee retention, businesses need to fundamentally change their management mindset by clearly identifying the primary training target group to design appropriate tiered training pathways, instead of applying a large- scale, uniform program. Businesses need to shift to a scientific training needs analysis process at all three levels: organizational analysis, job analysis and individual employee analysis. Based on the results of actual job performance evaluations and learner readiness, the HR and training departments need to establish a clear tiered roadmap to correctly identify the primary training target group and provide appropriate content for each group. For trainees, the

training process should prioritize analyzing individual characteristics to identify motivations, thereby focusing on transparent communication about the nature of the work and shift regulations to eliminate the risk of contract breaches due to psychological stress on the last day of the training. For probationary employees (under two months), the target group with the highest turnover rate, the training roadmap must closely follow job analysis and direct task assignments, focusing on fostering practical behavioral reflexes through visual simulations and establishing progressively increasing KPIs to provide a safe adaptation buffer. For permanent employees, businesses need to redefine the program evaluation process, shifting the nature of monthly retraining courses from a supervisory pressure- based punishment tool to a self- improvement policy, opening up a long- term career development path aligned with the organization's digitalization strategy.

**2.2. Recommendations for the University (East Asia University of Technology)**

As a key educational institution and provider of young talent, the university needs to integrate findings from business practices to adjust its training orientation, helping students proactively prepare before entering the digital labor market. The university should consider adding modules or in- depth seminars on emotional intelligence, stress management skills and adaptability to the industrial work environment into the main curriculum. Simultaneously, through strategic cooperation with large BPO companies like Bellsystem24 Vietnam, the university can build practical internship models helping students become familiar with concepts such as production targets and shift regulations early on. This collaboration not only enhances the practicality of the university’s curriculum but also acts as a natural psychological filter, significantly reducing the rate of disillusionment among students when they transition from university to the commercial production environment of businesses.

**2.3. Recommendations for students**

From the students’ perspective, to protect their mental health and enhance their personal competitiveness, they need to proactively change their mindset, shifting from the position of a passive learner to that of a highly disciplined and committed worker. When participating in hierarchical career paths within businesses, students need to proactively cultivate time management skills to

scientifically coordinate and balance their school schedules and floor shift work, avoiding panic that could lead to absenteeism and negatively impact overall operations. Facing a highly interactive yet stressful video call environment, young workers should view this as a practical laboratory to accumulate experience in emotional control and communication reflexes. Instead of giving up early when faced with difficult job orders, students should proactively overcome their defensive mindset of fearing mistakes, actively interact with peer support systems and frankly share obstacles with management to find solutions together, transforming work pressure into a springboard for breakthroughs in their abilities.

## D. APPENDICES

### Phụ lục 1: Phiếu khảo sát nhân viên

*Appendix 1: Employee Survey Questionnaire*

Khảo sát này được thực hiện nhằm thu thập ý kiến của anh/chị về chương trình đào tạo nội bộ hiện tại, hiệu quả sau đào tạo và mối quan hệ giữa hoạt động đào tạo với hiệu quả công việc cũng như ý định nghỉ việc của nhân viên. Mọi thông tin anh/chị cung cấp sẽ được bảo mật tuyệt đối và chỉ phục vụ cho mục đích nghiên cứu. Không có câu trả lời đúng hay sai. Xin vui lòng trả lời dựa trên trải nghiệm thực tế của bản thân. Thời gian thực hiện khảo sát khoảng 5-7 phút. Xin chân thành cảm ơn sự hợp tác của anh/chị.

*This survey is conducted to collect your opinions regarding the current internal training program, its effectiveness after training, and the relationship between training and job performance as well as employees' turnover intentions.*

*All information you provide will be kept strictly confidential and used solely for research purposes. There are no right or wrong answers. We kindly ask you to share your responses based on your actual experiences. The survey takes approximately 5-7 minutes to complete. Thank you very much for your cooperation.*

PHẦN I. THÔNG TIN CHUNG

*PART I. GENERAL INFORMATION*

Câu 1. Tình trạng hiện tại của anh/chị là gì?

- Hiện đang là sinh viên làm việc bán thời gian
- Đã tốt nghiệp và làm việc toàn thời gian
- Khác (vui lòng ghi rõ)

*Question 1. What is your current status?*

- *Currently a student working part-time*
- *Graduated and working full-time*
- *Other (please specify)*

Câu 2. Anh/chị đã làm việc tại bộ phận Video Call trong bao lâu?

- Dưới 1 tháng
- Từ 1 đến 3 tháng
- Từ 3 đến 6 tháng
- Trên 6 tháng

*Question 2. How long have you worked in the Video Call Department?*

- *Less than 1 month*
- *From 1 to 3 months*
- *From 3 to 6 months*
- *More than 6 months*

PHẦN II. PHẢN ỨNG – REACTION

Đánh giá cảm nhận và mức độ hài lòng của người học đối với chương trình đào tạo.

*Evaluating participants' perceptions and satisfaction with the training program..*

Câu 1. Nội dung đào tạo hiện tại có giúp anh/chị cảm thấy sẵn sàng thực hiện công việc thực tế sau khi hoàn thành khóa học không?

- Hoàn toàn chưa sẵn sàng
- Chưa sẵn sàng
- Sẵn sàng
- Hoàn toàn sẵn sàng

*Question 1. Does the current training content help you feel ready to handle actual work after completing the training course?*

- *Completely unprepared*
- *Unprepared*
- *Ready*
- *Completely ready*

Câu 2. Thời lượng chương trình đào tạo có đủ để anh/chị tiếp thu và thực hành kiến thức đã học không?

- Không đủ
- Đủ
- Quá nhiều
- Cần tăng thêm thời gian thực hành

*Question 2. Is the duration of the training program sufficient for you to absorb and practice what you have learned?*

- *Insufficient*
- *Sufficient*
- *Excessive*

- *More practical training is needed*

Câu 3. Trong các chương trình đào tạo sau đây, chương trình nào anh/chị cảm thấy khó khăn và áp lực nhất?

- Đào tạo hội nhập (nghiệp vụ xử lý đơn cơ bản)
- Đào tạo đơn nghiệp vụ
- Đào tạo an toàn thông tin
- Đào tạo lại do KPI chưa đạt yêu cầu
- Khác (vui lòng ghi rõ)

*Question 3. Among the following training programs, which one do you find the most difficult and discouraging?*

- *Induction training (individual order-processing operations)*
- *Business order training*
- *Information security training*
- *Retraining due to unsatisfactory KPI performance*
- *Other (please specify)*

PHẦN III. HỌC TẬP (LEARNING)

Đo lường kiến thức và kỹ năng đạt được sau đào tạo.

*Measuring the knowledge and skills acquired after training.*

Câu 4. Chương trình đào tạo đã cung cấp đầy đủ kiến thức và kỹ năng để anh/chị thực hiện công việc Video Call hiệu quả chưa?

- Rất không đầy đủ
- Không đầy đủ
- Bình thường
- Đầy đủ
- Rất đầy đủ

*Question 4. Has the training program provided sufficient knowledge and skills for you to perform Video Call tasks effectively?*

- *Very insufficient*
- *Insufficient*
- *Neutral*
- *Sufficient*
- *Very sufficient*

Câu 5: Chương trình đào tạo có cung cấp đủ kỹ năng để xử lý các tình huống phát sinh ngoài kịch bản hay không?

- Hoàn toàn không đủ
- Không đủ
- Bình thường
- Đủ
- Hoàn toàn đủ

*Question 5. Has the training program provided adequate skills to handle unexpected situations beyond the standard script?*

- *Completely inadequate*
- *Inadequate*
- *Neutral*
- *Adequate*
- *Completely adequate*

Câu 6. Trong 2 tháng đầu làm việc, anh/chị gặp những khó khăn nào sau đây? (Có thể chọn nhiều đáp án)

- Khó ghi nhớ và áp dụng quy trình xử lý đơn hàng
- Thao tác hệ thống còn chậm hoặc dễ sai sót
- Khó xử lý các tình huống phát sinh ngoài kịch bản
- Áp lực khi giao tiếp trực tiếp với khách hàng qua Video Call
- Khó thích nghi với tốc độ làm việc và KPI của bộ phận
- Áp lực tâm lý khi mắc lỗi hoặc bị đánh giá KPI
- Không gặp khó khăn đáng kể
- Khác (vui lòng ghi rõ):

*Question 6. During your first two months of work, which of the following difficulties did you encounter? (Multiple answers may be selected)*

- *Difficulty remembering and applying order-processing procedures*
- *Slow system operation or frequent mistakes*
- *Difficulty handling unexpected situations outside the script*
- *Pressure when communicating directly with customers via Video Call*
- *Difficulty adapting to the department's work pace and KPI requirements*

- *Psychological pressure when making mistakes or being evaluated based on KPIs*
- *No significant difficulties*
- *Other (please specify)*

PHẦN IV. HÀNH VI (BEHAVIOR)

Đo lường việc học viên đã áp dụng được những gì đã học vào công việc hằng ngày

*Measure how well learners have applied what they have learned to their daily work.*

Câu 7. Sau khi kết thúc đào tạo, anh chị có tự tin khi tiếp xúc với khách hàng qua Video Call không?

- Rất thiếu tự tin
- Thiếu tự tin
- Bình thường
- Tự tin
- Rất tự tin

*Question 7. After completing the training program, how confident do you feel when interacting with customers through Video Call?*

- *Very unconfident*
- *Unconfident*
- *Neutral*
- *Confident*
- *Very confident*

Câu 8: Trong quá trình làm việc, anh/chị đã từng được yêu cầu tham gia các khóa đào tạo lại do KI yếu bao nhiêu lần?

- 0 lần
- 1 lần
- 2 lần
- 3 lần hoặc nhiều hơn

*Question 8. During your employment, how many times have you been required to attend retraining programs due to weak KI performance?*

- *0 times*
- *1 time*
- *2 times*

- *3 times or more*

Câu 9: Anh/chị đã từng bị giám sát nhắc nhở về vấn đề nghiệp vụ hay hiệu suất công việc chưa?

- Có
- Không

*Question 9. Have you ever been reminded by a supervisor regarding professional performance or work efficiency?*

- *Yes*
- *No*

PHẦN V. KẾT QUẢ (RESULTS)

Đo lường tác động của đào tạo đến hiệu suất và ý định gắn bó

*Measuring the impact of training on performance and commitment*

Câu 10. Trong giai đoạn thử việc, anh/chị từng có ý định nghỉ việc không?

- Chưa từng
- Đôi lúc có ý định nghĩ đến
- Đã từng cân nhắc nghiêm túc
- Đã quyết định xin nghỉ

*Question 10. During your probation period, have you ever considered leaving the company?*

- *Never*
- *Occasionally thought about it*
- *Seriously considered it*
- *Already decided to resign*

Câu 11. Nếu chương trình đào tạo được cải thiện, tôi sẽ có xu hướng gắn bó lâu dài hơn với công ty.

- Hoàn toàn không muốn gắn bó
- Ít có xu hướng gắn bó
- Bình thường
- Có xu hướng gắn bó
- Rất muốn gắn bó lâu dài

*Question 11. If the training program were improved, I would be more likely to remain with the company in the long term.*

- *Completely unwilling to stay*
- *Unlikely to stay /*
- *Neutral*
- *Likely to stay*
- *Very willing to stay long-term*

PART VI. ĐỀ XUẤT CẢI THIỆN (IMPROVEMENT SUGGESTIONS)

Câu 12. Theo anh/chị, công ty nên ưu tiên cải thiện nội dung nào sau đây trong chương trình đào tạo?

- Thực hành cuộc gọi giả định
- Kỹ năng xử lý khách hàng khó tính
- Kỹ năng kiểm soát cảm xúc và áp lực
- Văn hóa doanh nghiệp và lộ trình thăng tiến
- Đào tạo nâng cao sau thử việc
- Coaching 1:1 với quản lý
- Khác (ghi rõ)

*Question 12. In your opinion, which of the following areas should the company prioritize improving in its training program?*

- *Simulated call practice*
- *Skills for handling difficult customers*
- *Emotional control and stress management skills*
- *Corporate culture and career development pathways*
- *Advanced training after probation*
- *One-on-one coaching with supervisors*
- *Other (please specify)*

Xin chân thành cảm ơn anh/chị đã dành thời gian tham gia và hoàn thành bảng khảo sát này. Những ý kiến đóng góp của anh/chị là nguồn thông tin quan trọng giúp nghiên cứu đánh giá khách quan hiệu quả chương trình đào tạo nội bộ và đề xuất các giải pháp cải thiện phù hợp, góp phần nâng cao chất lượng đào tạo và sự gắn bó của nhân viên trong tương lai. Kính chúc anh/chị nhiều sức khỏe và thành công trong công việc. Trân trọng cảm ơn!

*Thank you sincerely for taking the time to participate in and complete this survey. Your valuable opinions are an important source of information that will help this research objectively evaluate the effectiveness of the internal training program and propose appropriate improvement solutions, thereby contributing to enhancing training quality and employee retention in the future. We wish you good health and success in your career. Sincerely, thank you very much!*

**Phụ lục 2: Tài liệu nội bộ**

Bảng 2.3. Tổng quan các chương trình đào tạo nội bộ tại Bellsystem24 Vietnam

| Chương trình đào tạo | Tần suất | Thời lượng | Nội dung | Người đào tạo | Đối tượng tham gia |
|---|---|---|---|---|---|
| Đào tạo hội nhập | Khoảng 2 lớp mỗi 3 tháng | Khoảng 10 ngày | Kiến thức công việc, sử dụng hệ thống, kỹ năng xử lý khách hàng, các quy trình cơ bản | Nhân sự (HR), Giám sát viên | Nhân viên mới |
| Đào tạo An toàn thông tin | Khi có dự án Video Call mới được triển khai | Buổi đào tạo ngắn (tùy dự án) | Bảo vệ dữ liệu, bảo mật thông tin khách hàng, quy định của công ty | Giảng viên nội bộ hoặc giám sát viên | Tất cả nhân viên tham gia dự án mới |
| Đào tạo lại | Hàng tháng | Các buổi đào tạo ngắn | Ôn tập kiến thức nghiệp vụ, cải thiện hiệu suất làm việc, khắc phục | Trưởng nhóm hoặc giám sát viên | Nhân viên có kết quả làm việc chưa đạt yêu cầu |

| | | | | | |
|---|---|---|---|---|---|
| | | | lỗi phát sinh | | |
| Đào tạo nâng cao | Sau khoảng 2 tháng làm việc | 3 - 4 ngày | Kỹ năng xử lý khách hàng nâng cao, quy trình dịch vụ doanh nghiệp | Giám sát viên hoặc nhân viên giàu kinh nghiệm | Nhân viên đã vượt qua giai đoạn đào tạo ban đầu |
| Chương trình đào tạo | Tần suất | Thời lượng | Nội dung | Người đào tạo | Đối tượng tham gia |

Bảng 2.4. Cơ cấu lực lượng lao động Video Call theo thâm niên và kết quả KI giai đoạn 2022-2024

| Năm | Thâm niên | KI Xuất sắc | KI Tốt | KI Trung bình | KI Kém | Tổng |
|---|---|---|---|---|---|---|
| 2022 | Trên 12 tháng | 18 | 3 | 1 | 0 | 22 |
| | Từ 6 - 12 tháng | 12 | 2 | 1 | 0 | 15 |
| | Từ 2 - 6 tháng | 14 | 3 | 1 | 0 | 18 |
| | Dưới 2 tháng | 8 | 6 | 6 | 0 | 20 |
| | Tổng năm 2022 | 52 | 14 | 9 | 0 | 75 |
| 2023 | Trên 12 tháng | 21 | 2 | 2 | 0 | 25 |
| | Từ 6 - 12 tháng | 10 | 2 | 1 | 0 | 13 |
| | Từ 2 - 6 tháng | 16 | 2 | 1 | 0 | 19 |
| | Dưới 2 tháng | 10 | 13 | 13 | 2 | 38 |
| | Tổng năm 2023 | 57 | 19 | 17 | 2 | 95 |
| 2024 | Trên 12 tháng | 12 | 10 | 5 | 0 | 27 |
| | Từ 6 - 12 tháng | 5 | 7 | 5 | 0 | 17 |
| | Từ 2 - 6 tháng | 4 | 5 | 2 | 0 | 11 |
| | Dưới 2 tháng | 5 | 15 | 18 | 0 | 38 |
| | Tổng năm | 26 | 37 | 30 | 0 | 93 |

| | | | | | | |
|---|---|---|---|---|---|---|
| | 2024 | | | | | |

Bảng 2.5. So sánh tình hình nghỉ việc của nhân viên theo thâm niên giai đoạn 2022-2024

| Thâm niên | Năm 2022 | Năm 2023 | Năm 2024 |
|---|---|---|---|
| Trên 12 tháng | 3 | 4 | 5 |
| Từ 6 - 12 tháng | 4 | 4 | 6 |
| Từ 2 - 6 tháng | 8 | 10 | 7 |

*Appendix 2: Internal Documents*

*Table 2.3. Overview of Internal Training Programs at Bellsystem24 Vietnam*

| *Training Program* | *Frequency* | *Duration* | *Content* | *Trainers* | *Target participants* |
|---|---|---|---|---|---|
| *Initial Training* | *About 2 classes every 3 months* | *About 10 days* | *Job knowledge, system usage, customer handling skills, basic processes* | *HR staff, Supervisors* | *New employees* |
| *Information Security Training* | *When new videocall project is launched* | *Short session (varies)* | *Data protection, customer information confidentiality, company regulations* | *Internal trainers or supervisors* | *All employees involved in new projects* |
| *Retraining* | *Monthly* | *Short sessions* | *Review of job knowledge, performance improvement, error correction* | *Team leaders or supervisors* | *Employees with low performance* |

| | | | | | |
|---|---|---|---|---|---|
| *Advanced Training* | *After about 2 months of working* | *3 or 4 days* | *Advanced customer handling, enterprise service processes* | *Supervisors or experienced staff* | *Employees who passed initial stage* |

*Table 2.4. Video Call Workforce by Tenure and KI for the Period 2022-2024*

| *Year* | *Seniority* | *KI Excellent* | *KI Good* | *KI Average* | *KI Poor* | *Total* |
|---|---|---|---|---|---|---|
| *2022* | *Over 12 months* | *18* | *3* | *1* | *0* | *22* |
| | *6-12 months* | *12* | *2* | *1* | *0* | *15* |
| | *2-6 months* | *14* | *3* | *1* | *0* | *18* |
| | *Under 2 months* | *8* | *6* | *6* | *0* | *20* |
| | *Total 2022* | *52* | *14* | *9* | *0* | *75* |
| *2023* | *Over 12 months* | *21* | *2* | *2* | *0* | *25* |
| | *6-12 months* | *10* | *2* | *1* | *0* | *13* |
| | *2-6 months* | *16* | *2* | *1* | *0* | *19* |
| | *Under 2 months* | *10* | *13* | *13* | *2* | *38* |
| | *Total 2023* | *57* | *19* | *17* | *2* | *95* |
| *2024* | *Over 12 months* | *12* | *10* | *5* | *0* | *27* |
| | *6-12 months* | *5* | *7* | *5* | *0* | *17* |
| | *2-6 months* | *4* | *5* | *2* | *0* | *11* |
| | *Under 2 months* | *5* | *15* | *18* | *0* | *38* |
| | *Total 2024* | *26* | *37* | *30* | *0* | *93* |

*Table 2.5: Comparison of employee turnover by seniority for the Period 2022-2024*

| *Seniority* | *2022* | *2023* | *2024* |
|---|---|---|---|
| *More than 12 months* | *3* | *4* | *5* |
| *6-12 months* | *4* | *4* | *6* |
| *2-6 months* | *8* | *10* | *7* |
| *Under 2 months* | *10* | *22* | *26* |
| *Total* | *25* | *40* | *44* |
